

Corporate Profile

“In an era where everything is connected to complex networks, Allied Telesis enriches society with scalable, reliable and secure communication solutions.”

Takayoshi Oshima
Founder of Allied Telesis

Overview

Allied Telesis is a global leader in connectivity solutions with a vision to deliver zero-TCO (Total Cost of Ownership) solutions with smart networking tools that make networking easy for enterprise, government, education and critical infrastructure organizations. Our broad solution portfolio is ideally suited to build easy-to-use networking solutions that lower costs and reduce business risk. Our innovative technologies and comprehensive features enable seamless delivery of voice, video and data to empower innovation, increase business agility and help our global customers gain a competitive advantage.

Solutions & Offerings

Allied Telesis offers a comprehensive suite of end-to-end connectivity solutions including software, hardware and services. AlliedWare Plus is the common operating system on all our intelligent campus and industrial switches, and our firewalls and routers, which reduces training, and simplifies operation. Alongside our switching and routing products, we have an extensive range of wireless access points, media converters, network interface cards, and transceivers – giving Allied Telesis the widest range of networking products available from any vendor in the industry. To complete our solutions-based offering we provide a global professional services organization to enable our customers to focus on their core business, not the operation of their network.

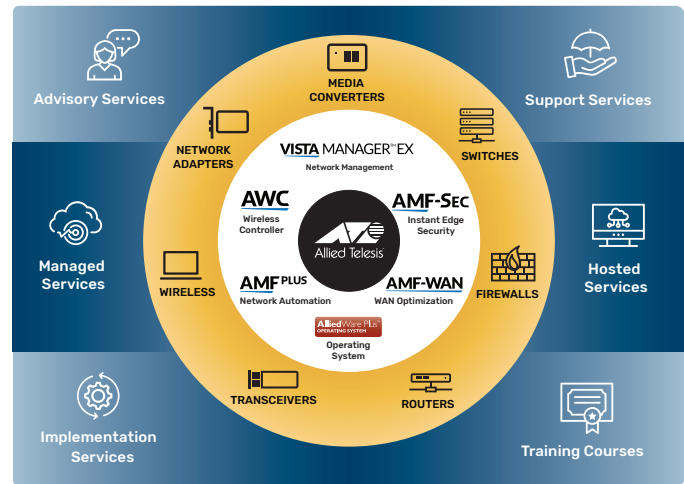

Customer Service & Support

Allied Telesis offers a range of managed services from remote network monitoring to on-site network management. Our support options include training, hardware support and a live 24/7/365 follow-the-sun local language help-desk, pre-sales and post-sales support in every region, as well as direct contact with specialists, and access to online Knowledge Base resources.

Differentiation

Our differentiation is our ability to be agile and responsive to address our customer needs directly and rapidly. Our customers rely on our expertise and understanding of their needs to deliver secure, reliable, high-performance solutions with low TCO that are future flexible.

Allied Telesis' solutions and services are designed to fulfill future network requirements today. We are committed to building better networks that deliver measurable value with innovative features and unsurpassed reliability.

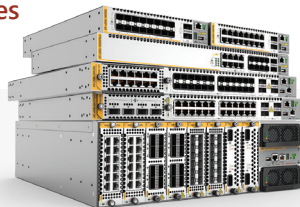

End-to-End Connectivity Solutions

Security
