For Immediate Release

Digital Watchdog Announces DW Spectrum Integration with Connect ONE

Cerritos, CA (June 14, 2018) – DW®, the industry leader in digital recorders, surveillance cameras and related management software, is proud to announce the release of the DW Spectrum integration with Connect ONE.

Connect ONE is a cloud-hosted security management service which includes intrusion, access control, video surveillance, environmental monitoring and energy management. Connect ONE works with the Bosch B and G series as well as DMP, ELK, and Honeywell Vista Turbo security and access control panels.

DW Spectrum and Connect ONE can be integrated via direct network connection or via DW Cloud. The new cloud integration between DW Cloud and Connect ONE’s cloud service eliminates the need to connect to an IP address or to open an inbound port on the end user’s network firewall. Once connected user can retrieve a camera list for quick & easy configuration, view live video, record snapshots upon an event from the Intrusion/Access System for video verification, review a 10-second Pre-Event and up to 45-second Post-Event video clip

“DW Spectrum is built on simplicity and ease of use, the partnership with Connect ONE simplifies system integrations” says Patrick Kelly, Director of IP Video Solutions Director of IP “Video verification of events gives a more complete picture of what is happening. By tying control panel events like intrusion alarms to the associated video, this integration enables our installing channel partners to deliver greater value to clients.”

Digital Watchdog Press Release

“Being able to provide the installation community with this critical integration between the widely specified DW Spectrum and Connect ONE helps expand the possibilities for integrated solutions,” says Dan Simon, Co-Founder and Managing Partner, Connected Technologies, Monument, Colo. “It adds value to their projects, brings exciting capabilities through a single user interface and helps differentiate their service offerings.”
