Before operating the system, please read this User Manual and retain it for future

reference.

WARNING

TO REDUCE FIRE OR SHOCK HAZARD, DO NOT EXPOSE THE UNIT TO RAIN OR MOISTURE.

The installation should be made by a qualified service person and conformed to all local codes.

Cautions

Read Before System Operation. Follow these details to prevent material damage or personal injury.

Signs of Caution and Warning

ackslash Warning: This sign indicates that the user could die or be seriously wounded if not used or installed properly.

Caution: This sign indicates that the user could be wounded or expect property damage if not used or installed properly.

 $^{ar{a}}$ Warning: Do not expose the product to fog, rain, or too much humidity to decrease the danger of electric shock or fire.

General Warning

🗥 Warning

1. Use the power cord, which is supplied or recommended by the supplier, or it may cause a fire.

- 2. Do not disassemble or reassemble the product. It may cause malfunction or fire.
- 3. Enquire with your vendor about repair. It may cause electric shock or fire if the repair is not done properly.

4. Do not touch the product with wet hands. It may cause malfunction or electric shock.

- 5. Product installation must be ensured by a professional for product installation, or it may cause malfunction, electric shock, or fire.
- 6. Ground applies to video products equipped with a 3-wire grounding type plug having a third (grounding) pin. This plug only fits into a grounding-type power outlet. If grounding is not done, it may cause malfunction or electric shock.
- 7. Ground connection must not touch gas or water pipes or telephone lines. If grounding is not done properly, it may cause electric shock.
- 8. Prevent metallic foreign substances from going inside the product. It may cause malfunction or electric shock.
- 9. Do not spray insecticide or flammable spray while driving. It may cause a fire.

10. Place the system in an open place where air ventilation is guaranteed, or it may overheat and cause considerable damage to the system.

11. Prevent water from installing inside electrical parts. Clean with a dry towel or malfunction to avoid electric shock during cleaning.

A Caution

1. Use the power cord that is supplied or recommended by the supplier. The internal fan rotates at high speed and may cause an accident. 2. Do not drop, give strong vibration, or shock the product. It may cause malfunction.

3. The air intake in the front panel and air vent in the back panel must not be blocked during installation.

- The internal temperature of the product would be greater than allowable and could cause malfunction or fire.
- 4. Do not touch the product or the power cord when there is thunder. It may cause an electric shock.

5. Do not install the product near or on top of the heating source. The internal temperature of the product would be greater than allowable and could cause malfunction or fire.

6. Do not install the product in an inclined or unstable location or where vibration could be committed. It may cause malfunction.

Cautions about the Power

Warning

1. Must use the outlet of the grounding to connect the power cord, or it may cause a fire.

- 2. Do not connect in the middle of the power cord or use an extension cord. It may generate heat or cause a fire.
- 3. Do not touch the power cord with wet hands. It may cause an electric shock.
- 4. Keep the power cord dry and protect it from humidity. It may generate heat or cause a fire. The power cord is not waterproof.

5. Hold the body of the plug while removing the power. Do not pull the power cord. Damage to the power cord may cause overheating or a fire.

6. Check the power plug regularly. Humidity and moderation in smoking may cause a fire.

7. Remove the power cord from the outlet when the product is not used for a long time. It may cause short-circuit or electric shock.

A Caution

 Do not turn off the power by removing the power plug. To turn off the power, click the power button from the front panel. When the system stops abnormally, the power button might not work. Click the power button for 5 full seconds to turn the power off.
 Do not cut off the power artificially, or shock or vibrate the unit while the HDD is active. It may cause hard disk failure or loss of data.

\land Remarks

st Pictures and buttons, functions, or configurations are subject to change or modification per the different models.

1. Getting Started

1.1 Checking Supplied Items

Make sure that you have the following items supplied with your NVR. If any of these items are missing or damaged, notify your vendor immediately. Keep the packing utilities for moving or storage purposes afterward.

Items	Photo	Quantity
Quick setup guide and download instruction card		1
DW-VG49 and DW- VG412 : 48V D/C and power cable DW-VG416 : 54V D/C and power cable		1
USB mouse		1

Note USB keyboard input is not supported. Connect a USB mouse to use the virtual keyboard and interact with the NVR interface.

1.2 System Startup

1.2.1. Connect External Devices

Follow the diagram below to connect all necessary external devices to your NVR. Please note that the number of ports available may differ based on the model. See the product's specifications at the end of this manual for more information.

To prevent the NVR from overheating, do not operate it in an area that exceeds the maximum recommended ambient temperature of 104°F (40°C). To prevent airflow restriction, allow at least 3 inches (7.6 cm) of clearance around the ventilation openings.

- * Back panel ports and location may differ according to the model. The model shown in the diagram above is the 16CH DW-VG416xT16P NVR.
- ** The audio input port in the NVR is disabled by default and will need to be configured in the NVR audio settings. For audio recording, use an IP camera with audio-input support or an external microphone.

1.2.2. System Startup

After connecting peripheral devices such as cameras, monitors and a mouse to the NVR, power up the NVR by connecting the DC48V adaptor/ power cable to the power jack on the rear panel. The boot logo will be displayed. Please wait until the boot process is complete.

When the system is starting, the Set Admin Password window is displayed. When you log in to your unit for the first time, you will be asked to set up a new password. The password must be between 8 and 12 characters long, with a combination of at least one (1) each uppercase letter, lowercase letter, a number, and a special character. Acceptable special characters are [-, +] () - | { } []; ? /]. To login, right-click anywhere on the screen and enter the username and password in the popup screen. There is only one Administrator Account configurable in the NVR. It is assigned with an unchangeable User ID marked as 'admin'. The administrator account has full access to the NVR and its configurable

parameters and can also create new users and assign rights to the new user accounts. If the NVR is set to AUTO LOGIN, you will not need to enter the login every time you start the unit.

Caution	 It may take a few minutes to start up the system after turning on the power in cases where the user sets the network configuration as DHCP mode but under the situation that there is no DHCP server in the network or the network is not
	connected. 2) The mouse is included. In cases where you need to replace it, it is highly recommended to choose well-known major brands such as DELL, MICROSOFT, LOGITECH, or SAMSUNG.
Note	 Do not forget the administrator's password that was set for the first time. In cases where you have forgotten your password, contact your local dealer for help. Refer to "Section 4.1.2 User" for AUTO LOGIN and AUTO LOGOFF settings.

1.3 System Shutdown

To shut down the NVR, click the exit button [CC] on the Toolbar at the bottom of the screen then click [SHUTDOWN] in the pop-up screen as shown below. To avoid potential electrical damage, do not disconnect power to the NVR by disconnecting the power plug from the NVR while in operation.

EXIT		
	LOG OFF	
	REBOOT	
	SHUTDOWN	
	CLOSE	

When prompting a SHUTDOWN, input the administrator password and click [OK] to shut down the system. Click [YES] to confirm shutdown.

	SHUTDOWN		SYSTEM
	USER PASSWORD	admin 🗐	DO YOU WANT TO SHUTDOWN THE SYSTEM?
	ОК		YES NO
Note	Users can i	nput passwords k	y using a mouse and the virtual keyboard.

1.4 System Explanation

1.4.1. Front Panel

** Front panel may appear differently according to the model.

- 1. Power switch (located on the back panel)
- 2. LED indicator: indicates system status for power, recording activity and network status.
- 3. USB port: for backup and upgrade.

1.4.2. The Toolbar in Live Mode

In Live View, move the mouse cursor to the bottom of the screen to show the menu bar.

Click on the menu button to access NVR's main menu screen. See section "4. Setting" for details.

Select the preferred display mode from 1CH, 4CH, 9CH, or 16CH split screen mode options.

Sequence 💴

Start/stop the sequencing mode in Live Mode to cycle camera displays in the viewing layout. The sequence is disabled if all channels are displayed.

Switch to a single-channel view of a specific channel by selecting the corresponding channel number.

The system records all channels with the full-frame rate at the maximum resolution regardless of the recording setting. To stop the emergency recording, click the same icon again.

Backup recorded video to an external device. See "4.6 Export" for details.

Switch to Playback Mode. See "3.7 Playback Recorded Image" for details.

Open the search options screen. See "3.8 Search Recorded Image" for details.

Exit the NVR with three different options: Log Off, Reboot and Shutdown.

When selected, the NVR's menu bar remains on the screen permanently.

1.4.3. The Toolbar in Playback Mode

In the Playback View, move the mouse cursor to the bottom of the screen to show the menu bar.

Channel 💷

Indicates the currently selected channel.

Intelligent Search Bar

Shows recording status for the selected channel from 00:00 to 24:00. A white-vertical line indicates the time currently displayed. Moving the white-vertical line will update the video while seeking.

Previous/Next Date Search

Users can move to the previous date or the next date to search through recorded footage.

Playback Controls

- I Playback speed control. (x32 / x16 / x8 / x4 / x2).
- 🕚 : Move backward one frame
- I stop button
- I : Play button
 - 🖉 : Move forward one frame
- I Playback speed control. (x2 / x4 / x8 / x16 / x32)
- 📧 : Current playback speed

Screen Display Mode

Select the preferred display mode from 1CH, 4CH, 9CH, or 16CH split screen mode options.

Backup recorded video to an external device. See "4.6 Export" for details.

Switch to Playback Mode. See "3.7 Playback Recorded Image" for details.

Close Playback Mode and move to Live Mode.

When selected, the NVR's menu bar remains on the viewing screen, regardless of the mouse's position. Deactivate the Pin to undo this setting.

2. Startup Wizard

When the NVR is launched for the first time, the STARTUP WIZARD will appear. This wizard helps you set up the NVR's most basic settings for proper functioning. You can access the Startup Wizard screen at any time by clicking the Startup Wizard [______] button in setting the "MENU>SYSTEM>SETTINGS" menu. (See "4.1.5 SETTINGS").

Note Only the ADMIN user can access the startup wizard.

2.1 Language

Select the language according to the country or user's preference.

If "RUN STARTUP WIZARD UPON REBOOT" is selected, the Startup Wizard will pop up every time the system is started.

🕺 STARTUP WIZARD	③ ∗∰∗ ₫ ×⊋∗≂≈® ⊗
LANGUAGE	
THIS WIZARD WILL GUIDE YO	U THROUGH
THE QUICK SETUP PROCESS F	FOR SYSTEM STARTUP
YOU CAN RECONFIGURE THES	E SETTING AT ANY TIME BY ACCESSING

LANGUAGE	ENGLISH
	RUN STARTUP WIZARD UPON REBOOT
	PREVIOUS NEXT APPLY

2.2 Date/Time

Select the NVR's date and time format, select the Time Zone, enable or disable daylight savings and sync the NVR with an NTP server or manually enter the date and time. You can also select to synchronize the NVR with an NTP server, which will automatically sync your NVR's date and time settings.

🐝 STARTUP WIZARD	(3)*(2)*(2)*(3)*(3)*(3)*(3)*(3)*(3)*(3)*(3)*(3)*(3
DATE/TIME	
DATE/TIME	12/06/2022 06:08:57 AM
DATE/TIME FORMAT	MM/DD/YYYY 🔽 AM/PM 🔽
TIMEZONE	(GMT-8) Pacific Time(US&Canada)
DAY LIGHT SAVING	USE DST
TIME SYNC MODE/CYCLE	NONE
SYNC SERVER	0.0.0.0
SYNC PORT	8002
NTP SERVER	pool.ntp.org
	SYNC NOW
	PREVIOUS NEXT APPLY

TIME SYNC MODE

There are four types of time sync modes:

- Server Mode: The operating NVR is set as a Time Sync Server, which can synchronize the time settings of other NVR(s) that are connected to it over the same network.
- Client Mode: Input the IP address of a designated NVR or a PC using Remote Software (C3 CMS) that is serving as a Time Sync Server in "SYNC SERVER". The NVR's time clock will be synchronized with the designated server by updating at regular time intervals as set in the "TIME SYNC CYCLE" setting.

- NTP Server Mode: "pool.ntp.org" is the recommended NTP Server. To activate, set the TIME ZONE of your local area then click [SYNC NOW].
- GPS Mode: Connect USB type GPS device and click [SYNC NOW]

2.3 HDD Format

Digital Watchdog's NVRs are shipped with pre-installed HDDs that are formatted and ready to be used. There is no need to format the HDDs out of the box.

Note If you have purchased an NVR without local storage included, you will need to format the HDDs after they have been installed to the NVR.

HDD FULL

Select "Overwrite" or "Stop recording" when HDD is full.

- Overwrite: NVR deletes the oldest data and records new data.
- Stop recording: NVR stops recording.

HDD CHECK

Click (CHECKE) next to each HDD to view full information of each HDD such as model name, serial no, capacity, bad sector ratio, lifetime (used time) and temperature.

HDD FORMAT

Check the box next to the HDDs you wish to format and press the "FORMAT" button. If system resources are currently occupied (such as network connection) during the format process, the format process may fail. It is recommended to reboot the system to release system resources and then try to format again.

AUTO DELETE

Set the period when the HDD will automatically delete all recorded data. Select from None (default) up to 366 days.

Note	1.	It may take a few minutes to format the HDD.
	2.	When the format is done, all data in the HDD will be deleted.
	3.	The system always reserves some space in each built-in HDD to effectively utilize
		archiving memory.

2.4 Network

Set up the NVR's network settings for remote connection.

🐝 STARTUP WIZARD	(1)
NETWORK TYPE	DHCP IP DETECT
IP ADDRESS	0.0.0.0
SUBNET MASK	0.0.0.0
GATEWAY	0.0.0.0
DNS SERVER	0.0.0.0 PING TEST
TCP/IP PORT	9010 🛃 WEB PORT 80 🛃
AUTO IP	169.254.97.59
BANDWIDTH LIMIT	1 Gbps(bits/sec)
	0%
	USE UPNP PORT FORWARDING
HELP	PREVIOUS NEXT APPLY

NETWORK TYPE

Select either STATIC IP or DHCP for dynamic IP. For proper configuration, it is recommended to assign the NVR a DHCP address and let the NVR auto-discover all the proper network settings, and then change the Network Type to Static IP and save the changes.

- DHCP: the NVR will automatically configure the network settings according to the current network requirements. If DHCP is selected, click the 'IP DETECT' button to automatically detect all the network settings.
- **STATIC IP:** manually enter all necessary network settings. While set to STATIC, the network settings will not change when prompted by the connected DHCP router or DHCP network device.

IP ADDRESS

Displays the NVR's IP address. If DHCP is selected, the IP address will automatically adjust to match the network's requirements. If STATIC is selected, the IP address can be manually changed as needed.

SUBNET MASK

Subnet Mask address classifies the subnet that the system belongs to. For more information, please consult your network administrator or your Internet provider.

GATEWAY

This is the IP address of the router or gateway server. It is required when connecting to the NVR through the external router over the Internet (from another network). For more information, consult your network administrator or your Internet provider.

DNS SERVER

Enter the IP address of the Domain Name Server. Input the DNS Server information to use DDNS, Email Notifications and NTP Server. For more information, please consult your network administrator or your Internet provider.

TCP/IP PORT

(Default – Port 9010) Input the network port number that is used when connecting to the NVR locally or remotely. If your ISP blocks Port 9010, you may either port forward the blocked port or change to use a different valid port number (ex, 9020). If there are multiple NVRs connected to the same local network, it should be considered to assign each NVR to different TCP/IP Ports.

WEB PORT

(Default – Port 80) Input the port number to use when connecting with a Web Browser. If your ISP blocks Port 80, you may either port forward the blocked port or change to use a different valid web port number (ex, 8080). If there are multiple NVRs connected to the same local network, it should be considered to assign each NVR to different Web Ports.

AUTO IP

Displays the system IP which is assigned through Auto-IP automatically.

BANDWIDTH LIMIT

(Default – 100 Mbps) Depending on the setting made by the user, the system can control the data volume transmitted over a network ranging from 25 kbps up to 1Gbps. This function is effective when under narrow bandwidth network conditions or when the user wants to limit "network bandwidth occupied by video transmission" to a certain level.

USE UPnP (Universal Plug and Play)

UPnP (Universal Plug and Play) Port Forwarding: If a UPnP supported router is connected, the NVR will forward ports automatically after communicating with the router without the need for complicated port forwarding setup at the router.

Once the PC has discovered the NVR using Network Discovery, double-click on the icon to open the NVR's web client. Enter the User ID and Password that is used to log in to the NVR then click 'Connect'.

Note	1.	The maximum number of simultaneous remote connections is 15 users.
	2.	For the other network settings, such as DDNS, Notification, Mobile Push & PathFinder,
		please refer to the "4.5 Network".

2.5 Camera Management

The Camera Management menu allows you to search, register and manage your IP cameras. See "3.2 Camera Registration" for more information.

Auto-Configuration (1)

The NVR will scan the network for all supported cameras and automatically register detected cameras to the available channels. Select the recording mode to apply to all registered cameras and press [START]. The NVR will search for all cameras under the same network (Router) and register them in order, automatically.

In cases where there are multiple NVRs on the network, it is recommended to use the Drag & Drop or advanced configuration options to avoid a camera being connected to multiple NVRs.

Drag & Drop Configuration (2)

The Drag & Drop Configuration scans the network for supported cameras, displaying the results in a table from which you can manually drag-and-drop cameras into the viewing channels to assign them to specific channels.

1. Click the [START] button to search for the camera.

- 2. Select a camera and while clicking on the camera, drag it to a channel to assign it.
- 3. Click the [APPLY] button to finish the process.

Advanced Configuration (3)

Search the network for cameras and manually configure and register them to the NVR.

2.6 **Product Registration and Finish**

Register the NVR and user information for technical support and maintenance.

When the setup wizard is completed, click "FINISH" to close and go to the live viewing screen.

3. Operation

3.1 User Log-in

Input the USER and PASSWORD credentials to log in after turning on the system. If a user forgets their password, they may click the 🗐 icon to check the password hint.

Note 1) LOGIN window will be permanently displayed until a user logs in with the right USER and Password.

2) If NVR is set to use AUTO LOGIN, the login process is will not be prompted whenever the system is powered on. See "Section 4.1.2 User" for more information.

Note The key in the virtual keyboard includes often used words, such as Admin, root, http://, rtsp://, www., .com, .net, .org etc.

3.2 Camera Registration

The NVR can connect to any ONVIF[®] IP cameras over the network. If the cameras are connected to the PoE switch in the back of the NVR, the cameras will also receive power and send data to and from the NVR.

Note As part of the cybersecurity settings of the NVR, the VMAX IP G4 will assign passwords automatically to new DW IP cameras that are added with a blank password. If a camera is added to the NVR for the first time, without having its password set from the IP Finder[™], the NVR will automatically assign it a new password. If the camera then needs to be connected to another NVR or system, users will need to reset the camera's settings.

3.2.1. PoE Camera Connection

PoE cameras are automatically connected when the camera is plugged into the PoE port. Channels assigned to cameras connected directly to the NVR's PoE switch will display the channel title in green. Cameras connected to the NVR's PoE switch must be set to 'DHCP' before being connected to the NVR. For cameras that support 'Auto IP', the NVR will automatically control its IP settings.

- **Note** If a PoE camera is connected to the PoE channel where another camera has already been virtually assigned to that channel, the virtually assigned camera will be moved to another channel and the PoE camera will be assigned to that channel.
- **Note** Zero-Configuration is the Link-Local IP address assignment method through Auto-IP and is for automatically assigning IP addresses when DHCP is otherwise not available or supported. The device that adopts this technology selects an IP of 169.254.xxx.xxx and assigns the IP address after checking the availability of the selected IP address.

3.2.2. Camera Connection through Network

The NVR supports three different methods to search and register cameras on the local network (not directly connected by PoE) to the NVR.

- Auto Configuration: allows the NVR to scan the network and automatically register the first cameras it finds to the available channels.
- Drag & Drop Configuration: scans the network for supported cameras, displaying the results in a table from which you can drag cameras to the viewing channel to assign them to channels.
- Advanced Search: settings and manually adding cameras, select SEARCH.

3.2.2.1. Auto Configuration

- 1. Select a recording mode for the cameras. This recording option will be applied to all cameras registered to the NVR.
- 2. Click [START]. The NVR will search all cameras under the same network (subnet) and automatically register them in the order that they are discovered.

AUTO IP CAMERA SEARCH
SEARCHING FOR NEW IP CAMERAS.
IF YOU WANT TO STOP SEARCHING,
CLICK THE 'STOP' BUTTON, AT ANY TIME.
10%
STOP

3.2.2.2. Drag and Drop Configuration

1. Click the [START] button to search for cameras. The NVR will search the network for cameras and display all results in the table on the right.

- 3. Click [APPLY] to save all changes.

3.2.2.3. Advanced Search

The Advanced Configuration menu allows you to search for cameras with advanced configuration options, manage assigned cameras and manually add cameras using individual URLs.

1. Click [SEARCH] to automatically search for all cameras on the network.

- 3. When [GET STREAM] is selected, the NVR will assign a channel number to the selected camera. Users can also select a specific channel number from the drop-down options.
- 4. [CAMERA INFO] shows the camera's basic information such as model name, IP address, Port number, and MAC address in detail.
- 5. [SETUP] allows users to control the camera's settings such as Resolution/Frame/Bitrate/Image Quality etc.
- 6. Click [APPLY] to register the selected camera to the NVR.

3.2.2.4. Multi-Select

1. Check the box next to [CAMERA MULTI SELECT] to select multiple cameras from the search results. Selected cameras will be highlighted in green.

- 2. Once all search results are displayed, the user can sort the table by the different columns such as protocol, IP Address, Hardware and Name, by clicking each property tab. The selected property will be highlighted in yellow.
- 3. Check the box next to [CAMERA MULTI SELECT] to select multiple cameras from the search results. Selected cameras will be highlighted in green.
- 4. When the [APPLY] button is clicked, cameras will be registered one by one starting from the top. Cameras that are already registered will be shown as unselected.

Note During the registration process of Camera Multi-Select, if there is a camera that has a different IP range or requires ID & Password, the process is paused, and the NVR will request the required information.

3.2.2.5. Manually Add Cameras

If a user wants to connect to an IP camera in a different network, the cameras can be added manually using the [ADD CAMERAS MANUALLY] button.

1. Click [ADD CAMERAS MANUALLY] to open the camera property window.

	ADD NEW IP CA	MERA MANUALLY	
2	ID	PASSWORD 💉	
3	CHANNEL	CH 2 🔽	
	PROTOCOL	ONVIF 🗸

3.3 Deleting Cameras

To delete a camera, go to Advanced Configuration by clicking [ADVANCED] in Camera Management (Menu > Record).

- 1. Non-PoE Camera Delete (X) button is always activated. Click X on the camera to delete it from the NVR's channels.
- 2. POE Camera POE cameras cannot be deleted while connected to the NVR's POE switch. To delete a POE camera, unplug the camera from the NVR and click the subtron when it is activated.

3.4 Camera Setup

Users can change the stream setup of registered cameras.

3.4.1. Setup for Each Camera

Go to Advanced Configuration by clicking [ADVANCED] in Camera Management (Menu > Record). Go to setup mode by clicking the [SETUP] button next to the desired camera.

You can also access the camera's setup menu by right-clicking on a camera channel during live viewing and selecting [CAMERA SETUP].

- 1. Click the [GET STREAM] button and get the current camera streaming status.
- 2. Click the [SETUP] button to change resolution, frame rate, image quality, etc.
 - **RESOLUTION:** Select the rescoring resolution from the available drop-down options.
 - FRAMES PER SECOND: Set the stream's frames per second speed from 0 to 30.
 - **BITRATE:** The maximum bitrate that the camera can use for image transmission.
 - QUALITY: Image quality for recording. The higher the quality, the larger the recording file size will be.
 - GOP: Group of pictures. The interval of I-Frame.
- 3. Current Streaming conditions This will display the camera's recording mode and FPS in real time.
 - FRAMES PER SECOND: Shows the current transmission frame.
 - **REC.:** Shows the stream that NVR records for the camera.

Note CCIP[™] Encryption Option

CCIP[™] (Closed Circuit Internet Protocol) System Encryption Protects Your Surveillance System from Out of Network Attacks.

Digital Watchdog's CCIP feature encrypts the RTSP stream using a TLS cryptographic protocol, adding a layer of security and end-to-end encryption. CCIP encryption works by the VMAX IP G4 system sending a request to encrypt the stream from the camera. The camera then encrypts its RTSP stream a second time in addition to requiring the user ID and password to authenticate. The result is a secured and encrypted RTSP stream that can be read-only through the requesting VMAX IP G4 NVR.

IP CAMERA STREAM SETUP	
MODEL IP ADDRESS	IPC-2141 200.0.0.10
CODEC RESOLUTION FRAMES PER SECOND BITRATE (Kbps) QUALITY GOP	H 1264 ♥ 1920 × 1080 ♥ 300 ♥ 2-STANDARD ♥ 300 ♥
AP	PLY CLOSE

If you are using a Digital Watchdog camera that supports the CCIP encryption option, check the button on the camera's setup page as shown (%).

When enabled, images from the camera will be seen through the current NVR only.

3.4.2. Quick Setup

Users can set up multiple cameras with the same recording settings simultaneously.

	RECORD > QUICK S	ETUP	KO 🚳	2 🧶 😫 🔊	\otimes	
	CAMERA MANAGEME	NT RECOR	DING SCHEDULE	QUICK SETUP		
1		DDEL		SELECT

	BITRATE (kbps)			₹		
	QUALITY			₹		
	PROGRESS		0%			
	HELP	F/W UPGRADE	ALL	AVE CANC	EL	

- 1. Select the model or camera multi-select for Quick Setup. When selecting 'Model' for the Method, all cameras with the same model's name will be selected.
- 2. When selecting 'Camera multi-select', the user can select which cameras to set. If you set the desired cameras to 'ON', the user can set up the settings of the selected cameras.
- 3. Click the [GET STREAM] button and get the current stream information.
- 4. Click the [Get INFO] button and check the current setup for the cameras.
- 5. Change setup and click [SAVE].
- 6. "CAMERAS ARE SUCCESSFULLY APPLIED" message will appear when the process has been completed.

3.4.3. Change Channel

ADMIN users can reassign camera channels by dragging & dropping cameras in the live display screen.

Channel PoE Port Channel No. No. Title Select a camera by clicking-and-dragging it to its new channel. While

dragging a camera, the mouse pointer will change to ³ . In the case of a PoE camera, the connected PoE port number and currently assigned channel will be shown as in the example below.

In Live Mode, users can check the status of PoE cameras by selecting the [PoE STATUS] menu.

Note Only the ADMIN user can change the channel allocation.

3.5 Live Display Mode

3.5.1. Channel Selection

Live camera images will display after powering ON the NVR. The images can be displayed in 1, 4, 9 and 16 split-screen options (some split options may not be available depending to the maximum number of

channels of the NVR). Whenever the screen display mode button () on the Toolbar is clicked, the screen will change to display the next channel or sequence of channels.

To switch from a multi-channel view to a full-screen, single camera display, double-click on the selected channel. To return to the previous screen mode, click the left mouse button again.

A "VIDEO LOSS" message will display on the screen when no camera is connected or if a camera is disconnected suddenly. When a camera is disconnected, a warning sound will emit, depending on the system's event alarm settings.

Admin users can set various levels of authorization for each user, to grant or exclude viewing access to specific channels. If a certain user is not authorized to view a channel, the image will be unavailable within the viewing screen and the DW logo will show instead of Live video as shown in the example below.

3.5.2. Icons

In Live Mode, icons will appear on the screen to notify of the system mode or status.

The	cons shown at the right-upper corner of each channel screen	The icons shown at the right-bottom corner of full-screen mode		
С	Continuous Recording	BED	No HDD detected	
М	Motion Detection Recording	E-REC	Emergency Recording is in use	
S	Sensor Activated Recording	PTZ	PTZ is enabled	
C+N	Continuous + Motion Alarm Recording	CHECK FAN	Warning for exceeding temperature	
C+5	Continuous + Sensor Activated Recording	SEQ	Sequence Mode is enabled	
M+	Motion Detection + Sensor Activated Recording	ZOOM	Digital Zoom is enabled	
С	Emergency Recording			
¢ 🛄 :	Sensor Activated			

1	Motion Detected	
	Audio Channel	
0	PTZ Camera	
Ş	Transaction Verification	

Note If you cannot find any recording icon in the right corner of the screen, then the system is not recording. Check the recording schedule or camera in the main setup menu.

3.5.3. Pop-up Menu

Users can right-click with the mouse to prompt the pop-up menu. If the user wants to control a specific channel, hover the mouse cursor over the desired channel then right-click.

DISPLAY MODE

Change the screen display mode from the available split-screen options.

CHANGE NEXT CH

Cycle to the next channel or next group of cameras in the current splitscreen mode.

SEQUENCE

When "SEQUENCE" is selected, **SEQ** an icon will appear in the bottom-right corner of the screen. The display screen will sequentially cycle through the registered cameras.

DIGITAL ZOOM

- Digital Zoom is available in a single-channel view only. When "ZOOM" is selected, ZOOM an icon will appear on the rightbutton corner of the screen and digital zoom control is available.
- To zoom in, click-and-drag the mouse over the desired area to create a zoom area. You can also zoom-in or zoom-out by scrolling the mouse wheel. The user can move the zoom area by clicking on the edge of the square and dragging it.
- To exit from zoom mode, right-click and select "ZOOM EXIT' on the menu.

IMAGE ADJUSTMENT

View the adjusted camera image menu (Please refer to "4.2.1 Camera"). Users can adjust images such as brightness, contrast, color, etc. The available options depend on the camera's ONVIF integration. See the camera's manual for more information.

PTZ

Activate PTZ control mode. (Please refer to "3.6 PTZ Operation" for detail.) The available PTZ options vary depending on the camera's ONVIF integration and PTZ capabilities. See the camera's manual for more information.

CAMERA SETUP

View the setup camera menu. (Please refer to "3.4.1 Setup for each camera") Users can set up resolution, framerate, etc. The available options depend on the camera's ONVIF integration. See the camera's manual for more information.

MENU	

DISPLAY MODE

FREEZE

Pause the current live view. The system clock (date/time information) will continue running at the bottom of the screen and the system will continue to record normally. Select "FREEZE" again to resume the live view.

ADD BOOKMARK

Add a bookmark with a description of the currently displayed image. Enter a description and click OK to save.

INSTANT PLAYBACK

Select from the time options (1 second to 5 minutes) to instantly switch to Playback Mode.

SEARCH

Search recorded video using the calendar, date/time, first and last data, system log, event log, transaction verification and bookmarks. (Please refer to "3.8. Search Recorded Image" for details.)

SMART SEARCH

Search recorded video in preview search or advanced preview search modes. See 3.9 Smart Search for more information.

SPECIAL CAM SEARCH

Search for a special camera log for video analytics. (See 3.10 Special Cam Search for more information.)

RECORDING INFO

Check the recording status of the NVR, such as Recording Period, Daily Recording Size (Average), Recording Days and Remaining Recording Days.

SYSTEM STATUS

See the system status, network condition, the number of clients currently connected to the NVR, PoE camera connection, etc. A green line means the camera connection is live and working.

ANALYSIS

Check the system's performance, general conditions and network conditions for each channel or the entire system. You may also check the status of cameras connected directly to the NVR's PoE switch and event status.

HEALTH CHECK

Display the NVR's system, network, camera, and HDD information as text. Select what information to display in health checks and set up the check cycle interval of how frequently the checks will occur.

MENU

Open the main menu setup screen.

3.6 PTZ Operation

To operate a PTZ camera, the channel connected to a PTZ camera should be in full-screen mode. To activate PTZ control, right-click and select "PTZ" in the pop-up menu. When in PTZ mode, **PTZ** will appear on the right-button corner of the screen.

In PTZ mode, the user can control the PTZ camera using the USB mouse. While pressing the left button, drag the mouse cursor up/down or left/right to move the camera's pan/tilt position. The further away from the center the mouse's cursor moves, the faster the PTZ camera will move.

To move the camera to a preset position, click the preset position number at the bottom of the screen to move the camera accordingly. The presets must be set before selection.

Note Full PTZ functions are available by using the USB mouse or keyboard controller. The availability of functions depends on the camera's ONVIF integration. Consult the camera's manual for more information.

ZOOM/FOCUS

If the mode is set to "Zoom", move zoom-in/out by rolling the wheel of the mouse. If the mode is set to "Focus", the camera's focus can be controlled by rolling the wheel of the mouse.

PRESET

When the preset menu pops up, select the preset number and click "Enter" to move to the corresponding preset position. The maximum Preset numbers supported is 255.

TOUR

Enable the TOUR function. When 'TOUR' is on, the camera will move to preset positions in order. To turn the tour off, right-click on the screen and select 'Tour'.

GUARD TOUR

When enabled, the camera will automatically switch positions according to the sequence of presets set in the GUARD TOUR settings. (See "4.2.3 PTZ" for more information.)

Caution Users can set an interval for each preset position. Some presets might be skipped in cases where a camera cannot <u>mechanically</u> move or cannot control focus within the interval time.

GOTO HOME

The camera moves to the original home position that is saved in the PTZ camera's settings.

SETUP

Go to the PTZ setup menu (Please refer to "4.2.3. PTZ").

PTZ EXIT

Close PTZ control mode.

3.7 Playback Recorded Images

To playback a recorded image, click the Playback icon (LCC) in the menu bar. When the NVR transitions to Playback Mode, it will automatically playback the latest recording image.

Date/Time (1)

Shows the date & time of the image that is being displayed.

Toolbar (2)

Contains playback controls, recorded data check, screen mode, etc. (See "1.3.4. Toolbar in Playback Mode" for more information.)

Pop-up Menu (3)

- **Display Mode:** Change display mode (1, 4, 9, 16 screen mode)
- Change Next CH: Change to the next playback channel.
- Digital zoom: Enable or disable digital zoom (available in a single-channel view).
- Backup: Open the backup window.
- Add Bookmark: Add a bookmark to the current image.
- Search: Search recorded data by various conditions (Please refer to "3.8 Search Recorded Image" for detail.)
- Smart Search: Search recorded data with Preview search and advanced preview search. (Please refer to "3.9 Smart Search" for detail)
- Live Mode: Go to Live Mode.

Exit Playback Mode (4)

Clicking the Exit icon 💹 in the menu bar will return you to the live view.

3.8 Search Recorded Video

Search recorded video by date and time, first and last data, events, bookmarks, etc.

To enter the search options menu:

- 1. In Playback Mode, right-click to enter the popup menu and select the search menu.
- 2. In Live Mode, press the Search button 🙉 in the Toolbar at the bottom of the screen.
- 3. Select the preferred search type.

3.8.1. Calendar Search

To search for data for a specific date and time, use Calendar Search to select the date and time of the footage.

Move the white-vertical line (\oplus) to the time you want to search.

The colors of the time bar represent the different recording modes. See "4.4.2" for more information. The time bar displays four channels at a time. To check the next 4 channels, change the group at the bottom of the window (②).

The asterisk "*" mark on dates (3) indicates days with recorded videos available.

3.8.3. First Data

Go to the first screen of the archived recorded video. This is the start of the oldest video recorded. First Data will be overwritten as the NVR records depending on the HDD settings. (For more information see Section 4.1.4 HDD).

3.8.4. Last Data

Go to the last screen of the recorded video. This is the most recent video recorded.

3.8.5. System Log

Find system log information such as System, Setup, or network events.

- 1. Select a date to search.
- 2. Select log type to search. Users can search for individual events or all at once.
- 3. Click [SEARCH] to show the search results in the list.
- 4. Click [EXPORT] to copy the list to an external device such as a USB flash drive as a ".csv" file. Once the export is completed, the user can find a folder that is labeled with the site

name. A "system.log" file with the exported log can be found stored in the site name folder.

3.8.6. Event Log

Find events such as sensor activation, motion detection, video loss, HDD full, or keyword.

- 1. Select a date to search.
- 2. Select log type to search. Users can search for individual events or all at once.
- 3. Click [SEARCH] to show the search results in the list.
- 4. Click [EXPORT] to copy the list to an external device such as a USB flash drive as a ".csv" file.

Note Up to 50 recorded events will be shown per page. Click the arrow buttons (

3.8.7. HDD Log

Users can search for HDD logs such as mount failure and record failure. If there is no problem with HDD, there is no log. Click [EXPORT] to copy the list to an external device such as a USB flash drive as a ".csv" file.

3.9 Smart Search

Users can search recorded video in split-screen mode by the hour or minute units. Smart Search supports two different modes – Preview Search and Advanced Preview Search.

3.9.1. Preview Search

Preview search breaks down a day's worth of recorded video for a camera into 12 still images, one for each hour. You can then "zoom" into the hour to display images for every minute of that hour. To use this search: "

- 1. Right-click on the selected channel and go to Smart Search > Preview Search
- 2. Select the date you wish to search for. Days with recorded video will appear in orange.
- 3. Click Search. The NVR will display 24 preview images (1-hour unit) of the channel on that day.
- 4. Double-click on a specific image or press the minute button to display 60 screen images (1-minute unit) by the minute.

Users can easily search substantial amounts of video for specific events with this preview search, allowing you to playback the recorded image of that moment.

The number of thumbnail images and the size of each image can be increased/decreased and the maximum no. is $196(14 \times 14)$, depending on the resolution.

In the preview search mode, the user can change the search date, and the display unit (time/minute) and go to Playback Mode directly by selecting a preview image.

3.9.2. Advanced Preview Search

Advanced Preview Search allows you to search a camera's data across multiple days, checking for abnormalities or events at a specific time of the day. To use the Advanced Preview Search:

- 1. Right-click on the selected channel and go to Smart Search > Advanced Preview Search.
- 2. Select the start and end dates you wish to search for. Days with recorded video will appear in orange.
- 3. Select the time interval you wish to search for. The interval can be set from 1 minute to 1 day. Once the interval is selected, set the time of the search. For example, if 1 day is selected, select the time of the day you want to search (e.g., every day at 5 PM).
- 4. Press Search. The NVR will playback the recorded image of the selected channel with the selected interval on the multiple screen mode, simultaneously.

3.10 Special Camera Search

3.10.1. Video Analytics

Search video analytics log for events such as object removal, scene change, video blur, video case, line crossing, intrusion, crowd density, people intrusion, people counting and face detection.

Note To view the special camera search, users must be in single-channel view mode and the camera must support video analytic capabilities.

- 1. Select a date to search.
- 2. Select the log type to search. Search individual events or all events.
- 3. Click [SEARCH] to show the search results in the list.
- 4. Click [EXPORT] to copy the list to an external device such as a USB flash drive as a ".csv" file.

36

3.11 DST Setting and Image Playback

Daylight Saving Time (DST) starts at 2:00 AM local time on the 2nd Sunday of March and ends at 2:00 AM DST on the 1st Sunday of November. During DST, the NVR's clock will be adjusted according to the regional time zone. The NVR's time will shift one hour after DST starts and restore the time clock to normal after DST ends.

3.11.1. DST Setting

To enable DST on the NVR, go to SYSTEM > INFORMATION and click "DATE/TIME¹. Select "USE DST" to apply the DST time change. (Select the proper Time Zone to activate DST)

3.11.2. DST Image Playback

When there is overlapped data due to DST, the overlapping hour will appear blue in the search bar during playback.

01						
-		Ē	6	Q	×	2

To play back data from the overlapped hour, select a time in the Intelli-search bar. A "Data Selection" message will appear. Select whether to play DST data or non-DST data.

3.12 MEGApix[®] IVA[™] Analytics

3.12.1. IVA Settings

When a MEGApix IVA or IVA+ IP camera is connected to the NVR, the system will display [IVA EVENT] at the bottom of the screen. The camera's preview will include the existing rules' zones and when an IVA event occurs, an event notification icon will appear on the top right of the camera's display.

(*IVA rules can be created and managed from the camera's Web Client, accessible through a web browser. To create, edit or delete IVA rules, please refer to the IVA camera user manual.)

MEGApix IVA camera settings are enabled in [IP CAMERA SETUP] - [IVA EVENT]. Click on the IVA EVENT button to enable the camera as a MEGApix IVA camera and select the appropriate OSD settings.

IP CAMERA SETUP

 SHOW OBJECT AREA: This shows the area of a detected object.
 NOTE: To enable the SHOW EVENT AREA, this option must be disabled.

- SHOW OBJECT TRAIL: This shows the trail when a detected object is moving.
- SHOW OBJECTED ID: This shows the ID of a detected object.

- SHOW EVENT AREA: When checked, the event area is displayed only when an event occurs. To use this option, SHOW OBJECT AREA must be disabled.
- SHOW RULE AREA: This shows the 'RULE' area. (Refer to the camera's manual for the RULE setting.)

3.12.2. ALARM MANAGER

Set an IVA EVENT ALARM

If the user checks 'USE', the settings window will be activated and the user can set an event alarm name, type, and notification type (pop-up, buzzer, relay, etc.).

- Name: Create a name for the IVA event alarm.
- **Type:** Select the alarm event type. The alarm type is directly related to the analytic type triggered by IVA analytics.
- CH: Enable 'CH' and select the channel of the camera.
- **Popup/Buzzer/Relay:** Select how the NVR will respond when the alert is triggered.
 - Popup: A pop-up window will display.
 - Buzzer: An alert tone will emit from the NVR.
 - Relay: An external relay (RS-485 connection) will trigger.
- **Notify:** Select the notification type that will be sent. (See Section 4.5.3 Notification for more information.)

4.1 System

43

4.1.1. Information

SITE NAME

Enter a site name to differentiate the NVR from other sites if there is more than one NVR present.

KEYBOARD ID

Set up the SITE ID to match the ID settings of a keyboard controller. The keyboard model and BUAD RATE must be set up in "MENU > DEVICE > KEYBOARD" (See "4.2.5 Keyboard").

REMOTE ID

Not supported

DATE/TIME

Using the available options, the administrator can manually adjust the system date and time, select the time and the date format, and select the appropriate time zone. If applicable, check the 'USE DST' box to use daylight savings time.

DATE/TIME				
	DATE/TIME	12/0	8/2022 05:16:44 AM	
	DATE/TIME FORMAT	MM/	DD/YYYY 🔽 AM/PM 🔽	
	TIMEZONE	(GM	T-8) Pacific Time(US&Canada) 🛛 🜈	
	DAY LIGHT SAVING	VU	ISE DST	
	TIME SYNC MODE/CYCLE	NON	E 🔽 1 HR 🛡	
	SYNC SERVER	0.0.0).0	
	SYNC PORT	8002	fail fail	
	NTP SERVER	pool.	ntp.org	
			SYNC NOW	
HELP			SAVE CANCEL	

There are three types of time sync modes.

- Server Mode: The operating NVR is set as a Time Sync Server, which can synchronize the ٠ time settings of other NVR(s) that are connected to it over the same network.
- Client Mode: Input the IP address of a designated NVR or a PC using Remote Software (C3 • CMS) that is serving as a Time Sync Server in "SYNC SERVER". The NVR's time clock will be

synchronized with the designated server by updating at regular time intervals as set in the "TIME SYNC CYCLE" setting.

- NTP Server Mode: "pool.ntp.org" is the recommended NTP Server. To activate, set the TIME ZONE of your local area then click [SYNC NOW].
- GPS Mode: Connect USB type GPS device and click [SYNC NOW]

For the DST settings, please refer to "3.11 DST Time Setting".

LANGUAGE

Select the display language for the system.

VERSION

View the NVR's current firmware version and update it to a newer version via USB Memory Stick or FTP server.

Caution Do not click CANCEL during firmware upgrade. It may cause considerable damage to the system.

Settings may be changed to factory default. It is recommended to check the settings and operating conditions of the NVR after the firmware upgrade.

Upgrading system using USB memory stick:

- 1. Insert a USB drive with the firmware file formatted by FAT/FAT32 in any USB port of the NVR (compatible with USB 2.0).
- 2. Select 'USB' from the Method drop-down options and press the 'Scan' button.
- Once the system detects the USB drive, it will display the firmware file under 'CURRENT VER' and the 'NEW VER'.
- 4. Click START to begin the upgrade process.

Upgrading system via FTP server:

- 1. Select FTP in the drop-down options under 'Method'.
- 2. Enter the FTP's address: <u>FTP.dwcc.tv</u> and enter the username and password (these should be filled out automatically). Username: vmaxipplus, password: vmaxipplus.

NOTE The FTP server address is subject to change without a prior notice

- 3. Enter Check Time. The system will automatically check the FTP server for newer firmware every day at set hours.
- 4. Click the [OK] button to proceed with the automatic firmware upgrade. After completion, the system will reboot.
- Click 'Check' to allow the NVR to connect to the FTP server and check the latest Firmware version. If new firmware is available, the NVR will ask you whether you want to upgrade it or not.
- 6. Click 'OK' to confirm and click 'START' to start upgrading.

To set up the NVR to check for new firmware automatically:

- 1. Select FTP from the METHOD drop-down options.
- 2. Make sure the FTP information is entered correctly (see the section above).
- 3. Enter your convenient time at CHECK TIME and then click the [SAVE] button.

4.1.2. User

The ADMIN user has full authority for system settings and can change the system password or add/delete users and assign different permission levels to them.

Note The maximum number of users including an administrator is 16.

User Management

Admin users can control authorization for each function. This authorization is applied when the user connects to the NVR from remote software as well.

	SYSTEM	1 > USER		(C)	°0 🕄 🍣	9 9 🖉 😣

	HELP				SAVE	CANCEL	

- 1. Add User
 - a. Click [ADD].
 - b. In the new setup window, set the new user's ID, description, password and password hint.
 - c. Select which functions and menu options the user will have access to by checking the box next to the corresponding functions.
 - d. In Live and Playback Mode, only the selected channels are visible to the user.
 - e. To change the setting, select the user and click [Edit].
- 2. Delete User
 - a. Select a user in the list by highlighting their name and clicking [Delete].
- 3. Option
 - a. If Auto Logon "On Boot" is enabled, the NVR will not request ID and password after powerup. OPTION
 - b. If "Auto Logoff" is enabled, the NVR will log off the current user after the set time of inactivity.
 - c. If "show live" is checked, the live image will be shown after logging off.

Setting Authorized Level at the Remote Software (C3 CMS)

The level of authority for the user is linked between the NVR and remote software. If a user has been restricted in the NVR, those restrictions will also be applied when operating the remote software.

4.1.3. Display

Set the Sequence dwell time, Display Resolution, OSD display options and spot-out channel.

SEQUENCE TIME

Set the dwell time for the channel sequence display. Camera channels will rotate during Sequence according to this setting.

DISPLAY RESOLUTION

The system supports the following kinds of resolutions: 800x600, 1024x768, 1280x1024, 1920x1080 and 3840x1260. Set the proper resolution output per the connected monitor resolution. DO NOT set the display resolution to be higher than what the connected display monitor can support.

OSD

Select what information will appear and overlay the channel displays by checking the corresponding boxes.

SCREEN SAVER

The Screen Saver feature protects the display monitor's screen and reduces resource use of the NVR by turning the display off after a set time of inactivity. Set the screen saver's waiting time for when the monitor will automatically turn off. Set in between 1 minute and 180 minutes. For increased security, select to log off the current user when the screen saver activates.

CHANNEL SWAP

Check for swapping the channel by drag and drop.

VIDEO ENHANCEMENT

Set the display details such as brightness, contrast, sharpness and etc. (*This function may not be supported depending on the NVR model.)

4.1.4. **HDD**

HDD FULL

When an HDD is full, select whether to "Overwrite" or "Stop recording".

- **Overwrite:** Record new data over the oldest data in the drive.
- Stop record: Stop all NVR recording when the HDD is full.

HDD CHECK

Click [CHECK] next to each HDD to open the health check window. See full information for each HDD such as model name, port, serial no, capacity, bad sector ratio, lifetime (used time) and temperature.

	ST2000VM	003-1ET1	
	SATA: 0 (0:0:0:0)	
SERIAL NUMBER	W6A1k	W4T	
	1861.9 GB		
	SUPPORT		
ATTRIBUTE NAME	CURRENT STATUS	THRESHOLD	
	0 %	100%	
	650 (d)		
TEMPERATURE	37 'C		

Caution WARNING MESSAGE

To achieve high-level system stability, a warning message of elevated temperature will display when the temperature inside the NVR exceeds the optimum range. This problem may be caused by the malfunction of ventilation fans or environmental factors. Inspect to see if the cooling fan is properly working or if the environmental temperature around the system is too hot.

HDD FORMAT

When a new HDD is installed or if there is a problem with the HDD, formatting the HDD is recommended. All data on the HDD will be deleted during an HDD format.

If system resources are occupied such as during a network connection while the HDD format is in process, the formatting may fail. Reboot the system to release system resources and then try to format again.

Check the box next to the HDD name to select it. Press the "format" button to format the HDD.

AUTO DELETE

Set the period when the HDD will automatically delete all recorded data. Select from None (default) up to 366 days.

Note 1) It may take a few minutes to format an HDD.

2) When the format is done, ALL DATA in the HDD will be deleted.

 The system always reserves some space in each built-in HDD to effectively utilize archiving memory.

4.1.5. System Settings

SYSTEM > SETTINGS	(🗞 🤗 🖉	9 🏓 🛷 🛛 🛇

HELP			CLOSE

STARTUP WIZARD

Users can register their information on the DW server. Registering the product can assist DW personnel when seeking product support and repair.

STARTUP WIZARD

Click [START] to prompt the startup wizard.

FACTORY DEFAULT

Reset the system to its factory configuration. All the configurations will be deleted, and the system settings will return to its original factory default. The recorded video will not be deleted.

EXPORT/IMPORT

Save the system settings from this NVR or copy them to another NVR.

- **Export:** Copy the settings of this system to a USB memory device.
- Import: apply settings from another NVR via USB memory device.

NOTE If uploading exported settings to a different NVR, the F/W version of the new NVR must be the same version as the sourced NVR.

4.2 Device

4.2.1. Camera

Set each camera's title, covert channel settings, privacy masks and general camera adjustments.

M TITLE COVERT PRIVACY MASK CAMERA ADJUST
1 CH1 Ø OFF ▼ SET SET 2 CH2 Ø OFF ▼ SET SET
2 CH2 🛋 OFF 🔻 SET SET
3 CH3 🖋 OFF 🔻 SET SET
4 CH4 💉 OFF 🗟 SET SET
5 CH5 📌 OFF 🗟 SET SET
5 CH6 🗲 OFF 🗟 SET SET
7 CH7 🗲 OFF 🗟 SET SET
B CH8 💋 OFF 🔽 SET SET SET

Note To be able to set up these functions from the NVR and affect camera settings, the cameras must support ONVIF. If the camera is ONVIF but the settings were not integrated via ONVIF, you will have to set up the camera's settings from the camera's menu.

TITLE

Designate a name for each channel. The name will appear both in the NVR and remote software.

COVERT

"Covert," also called 'hidden camera', hides camera display and playback as if there were no camera recording for non-admin users. Covert settings apply to both Live and Playback viewing in both the NVR and remote software.

Note Only the ADMIN user can set up a covert menu. Non-admin users will see a blank channel.

PRIVACY MASK

Hide specific areas in the camera's Field of View (FoV) in live and Playback Mode. Please check that your camera supports this feature.

- 1. Click [SET] beside the desired channel to configure a privacy mask.
- 2. Use the popup menu on the bottom right to select where to place the privacy mask, assign a color, and index number to the mask. Click 'Save' to save the changes and 'Exit' to return to the main setup page.

CAMERA ADJUST

Set the camera's brightness, contrast, color, etc.

1. Click [SET] in the 'CAMERA ADJUST' section beside the desired channel.

- 2. Adjust the applicable options using the drop-down menu options.
- 3. Click 'Save' to save the changes.
- 4. Switch to the next channel using the arrow buttons (
- 5. Changes will apply to the camera's view automatically.
- 6. [Apply All] makes all channels have the same value.
- 7. Click [EXIT] to exit.

4.2.2. Audio (Live and Recording)

Select an audio input and output and match it to a specific channel. The number of audio channels may differ depending on the NVR model. When enabled, the channel will start recording video with the associated audio channel, allowing users to playback recorded video with audio.

- **AUDIO:** Activate and designate camera channels for audio input capture. To hear audio, an audio output device must be connected to the NVR or be viewed using the Web Viewer.
- LIVE OUT: Activate and designate camera channels for audio output through a connected speaker. An audio output device must be connected to hear audio from the NVR. Full screen the channel to hear video while viewing in Live Mode.
- USE 2-WAY AUDIO: Enable to allow two-way audio for connected devices.

4.2.3. **PTZ**

Full control of the PTZ camera is available on this menu. Please refer to the "3.6 PTZ Operation" for more information on operating a PTZ camera.

- 1. If the camera is connected to the NVR via ONVIF protocol, make sure ONVIF PTZ is selected in the Protocol field.
- 2. If the camera is connected via RS-485 cables, make sure of serial communication with the PTZ camera through the RS-485 port is set up properly. The Protocol, baud rate and camera address set in the NVR must match the ones set in the camera's setting.

CAMERA	AUDIO	PTZ	TR	ANS	. VERI.	KEYBOARD
CAM	PROTOCOL		BAUDRATE		ADDRESS	CONTROL
1	ONVIF PTZ		4800 BPS		1	SET
2	ONVIF PTZ		4800 BPS		1	SET
3	ONVIF PTZ		4800 BPS		1 1	SET.
4	ONVIF PTZ		4800 BPS		1	SET
5	ONVIF PTZ		4800 BPS		1 1	SET .

8	ONVIF PTZ		4800 BPS		1 📌	SET.
<<	CH 1~8 🔻 >>	3				
ELP					SAVE	CANCE

PROTOCOL

Select the proper protocol of the connected PTZ camera. This determines the protocol that the camera and NVR communicate with. This field does not need to be changed if the camera is connected to the NVR over the network via the ONVIF protocol. Default is ONVIF PTZ.

BAUD RATE

Select the baud rate level from 2,400bps up to 57,600bps. This determines the rate that information is transferred between the camera and NVR. This field does not need to be changed if the camera is connected to the NVR over the network via the ONVIF protocol.

ADDRESS

Set the P/T/Z driver address of the connected camera. This determines which camera to send PTZ signals to if connected by RS-485 and should be the same address as that of the PTZ camera. This field does not need to be changed if the camera is connected to the NVR over the network via the ONVIF protocol.

CONTROL (The functions depend on the camera's model and supported features)

When the [SET] button is clicked, the OSD menu of the camera will appear on the monitor. Set the PTZ's speed, preset, tour, auto-pan, etc.

- Direction buttons: move camera up/down & left/right.
- M (depends on the PTZ model): Show/ hide the camera's OSD menu on the NVR monitor. Use the directional arrows to navigate the menu options.
- ZOOM/FOCUS/IRIS: Control IN (+)/OUT (-) for each function. (Depending on the camera's model and supported features).
- **Speed:** Change the PTZ speed (0-100). This sets the speed at which the camera will move when controlled from the NVR using the virtual joystick. Save the changes by clicking [SET].
- **Preset:** Select the PTZ preset position that was created within the PTZ camera itself. Preset position setup must be configured within the camera's web interface.
 - \circ $\;$ ADD: Move the camera's position and zoom to the desired position. Select the

preset number using the 🗖 button. Press [ADD] to save the new preset. (The system supports preset the number of presets from 1 to 255.)

- \circ $\hfill \hfill \hf$
- MOVE: Enter a present number and press [Move] to move the camera to the preset position of that number.
- TOUR: Set the camera to move between preset positions in order. The camera will keep running the tour until it manually is disabled.
- AUTO-PAN: Set the camera to move 360 ° in one direction. The camera will keep running the auto-pan until it manually is disabled.
- GUARD-TOUR: Set the camera to move between selected presets in a set order and interval. The camera will keep running the guard tour until it is manually disabled.
 - Set: Set the Interval (Sec) and select the preset position. Add to Sequence by clicking the button. The preset will appear in the Sequence column indicating the preset number and the set interval time.
 - Delete: To delete a preset position from the sequence, select the preset in the Sequence column and click the sequence.

- MOVE: Start GUARD TOUR.
- HOME: Set the camera to move to an original position memorized by the camera.

In cases where the PTZ camera is directly connected to the rear panel of NVR, the AUX control button (AUX) is shown. Users can control additional settings such as Power, Light, Wiper and Pump, etc.

4.2.4. Transaction Verification Settings

Transaction verification equipment can be connected to NVR through the RS-232 port or LAN.

DEV	ICE > TR	ANS. VE	RI.	10	🔊 🔒 🔌	چ 🖋 😫
CA	MERA	AUDIC) PTZ	TRANS	S. VERI.	KEYBOARD

HELF					SAVE	CANCEL

NO

Port Number of the Serial connection (RS-485 terminal block). For example: NO1 = COM1, NO4 = COM4.

CAM

Assign a camera to the Transaction Verification device. The Transaction information will be associated with the assigned camera.

TYPE

Connection type between NVR and Transaction Verification device.

PROTOCOL

The communication protocol between NVR and Transaction Verification device.

SAVE

Enable or disable the NVR to save the transaction data.

SHOW

Enable or disable the NVR to display the transaction data.

SETUP (1)

Transaction Verification Settings

- NO: ID# of Transaction Verification device.
- CAMERA: Select the camera to assign to the Transaction Verification device.
- TYPE: Select COM (RS-232) or TCP/IP (LAN)
- **DEVICE IP:** Input the IP address of the Transaction Verification device when it is connected through the network.
- **PROTOCOL:** Communication protocol between NVR and the Transaction Verification device.
 - 1. TEXT-IN: Receive an ASCII character.
 - 2. SNVR-POS: Manufacturer's protocol.

Contact your Transaction Verification dealer for information.

NO	1				
CAMERA	NONE	T	TYPE	USBCOM	
DEVICE IP	0.0.0.0				¢.

	SHOW		SCROLL RE	VERSE	

- START CHARACTER: Input the assigned character to start display and save. If there is no input, the system will display and save all data without classification per transaction.
- END CHARACTER: Input the assigned character to terminate display and save. It must have a START CHARACTER to work correctly.
- LINE BREAK: Set the line change character. (It should be 16 digits HEX Value.)
 - 1. [CRLF] / [CR] / [LF]: The character that is used in ASCII-type Transaction Verification. (Please contact the Transaction Verification manufacturer for detail.)
 - [Custom]: It can be used except for the above general character. Only numbers (0-9) and alphabet (A ~ F) can be used and even numbers should be input.
 ex) Hexadecimal: 0x0D 0x0A → 0D0A.
- SAVE: Save the transaction verification data.

Live Display Settings

- DISPLAY LINE: Set the number of lines to display on the screen.
- CLEAR TIME: Set the period to display text on the screen. Data will be deleted from the screen if no new data is entered after the set time. If it is set as "0", the data will not be deleted (If there is Start Character and the character is input, current data will be deleted regardless of the Clear Time setting).
- **POSITION:** Designate the display position of transaction data.
- FONT COLOR: Select the font color which will be displayed on the screen. It will be displayed with the color that is shown on "SAMPLE TEXT"
- **SHOW:** Select to display transaction data in the Live Mode. Transaction data will overlay the video stream.
- SCROLL REVERSE: Select to change the direction of scrolling. If it is selected, you can scroll from the bottom to the top, the latest data is displayed on the top.

PLAYBACK DISPLAY SETTINGS (2)

Open setup screen for Playback Mode

- **DISPLAY LINE:** Set the number of lines to display on the screen.
- CLEAR TIME: Set the period to display text on the screen. Data will be deleted from the screen if no new data is entered after the set time. If it is set as "O", the data will not be deleted (If there is Start Character and the character is input, current data will be deleted regardless of the Clear Time setting).
- **POSITION:** Designate the display position of transaction data.
- FONT COLOR: Select the font color which will be displayed on the screen. It will be displayed with the color that is shown on "SAMPLE TEXT"
- SHOW: Select to display transaction data in the Playback Mode.
- SCROLL REVERSE: Select to change the direction of scrolling. If it is selected, you can scroll from the bottom to the top, the latest data is displayed on the top.

PORT SETUP (3)

Open the setup screen for the communication port.

- **TYPE:** Set up the type of communication port.
 - SERIAL: It is for a 1-to-1 connection between 0 NVR and Transaction Verification device without Serial Mux.
 - MUX: It is for a 1-to-Multi connection 0 between NVR and Transaction Verification device
- **BAUDRATE:** Set BAUDRATE according to the • Transaction Verification device.
- PARITY: Set the parity according to the connected device.
- DATA BIT: Set DATABIT according to the connected Transaction Verification device.
- STOP BIT: Set STOPBIT according to the connected Transaction Verification device.
- TCP/IP PORT: Set the TCP/IP Port number.

PORT SETUP

ON/OFF

Turn on or turn off the sensor input.

САМ

Select the associated camera for the alarm.

RELAY

Select the associated alarm output for serial connection (RS-485).

Caution Relay contacts can stand up to 24V/1A. In cases where it is connected to the external circuit which is over 24V/1A, it can cause a problem in the system.

PRESET

Set a PTZ camera to move to a preset position when the sensor is triggered. A PTZ camera must be assigned for the alarm and the preset position must be configured within the camera.

DWELL (Post Alarm)

Set the recording period from when the sensor is activated. During this period, the selected camera will record according to the record-setting. The recording stops and the alarm output is turned off when the set period has passed.

PRE-ALARM

Set a recording period in seconds just before a sensor is activated. Input up to 5 seconds. The prealarm recording mode is always "continuous" at the recording speed that the user sets in the "Record" menu. The recording period will run before triggering the alarm.

TYPE

Select the sensor type as N/O (Normal Open) or N/C (Normal Close). The circuit of a N/O sensor type is usually open, and the activation of the sensor occurs at the time of close, and the N/C type works the reverse way.

Note Check the setting of the sensor type (N/O or N/C). It is recommended to use "Dry Contact

Type" while "Wet Contact Type" may cause damage to the system.

NOTIFY

Enable and select for the sensor notification to create a buzzer sound and/or a pop-up warning when triggered.

Note When "Camera pop-up" is enabled, in a multi-screen mode, the system will switch to singlechannel mode and automatically when the alarm is triggered.

4.3.2. Camera Alarm

Set up the NVR to start recording when motion is detected. The system can also trigger an alarm signal via the selected sensor-out channel. Motion detection must be enabled and configured within the associated camera for the NVR to detect motion.

ALARM	> CAMER	A AL	larm 🦚 🧑 🋃 🕸 🏓 🖋						\otimes
S	ENSOR			CAMERA ALA	RM			EXTRA ALARM	
SETUP M	IOTION AND	SENSO	RS CONN	ECTED TO TH	E C/	MERA.			
CAM	ON/OFF		RELAY	DWELL		PRE-ALARM		MOTION AREA	
1	ON	₹	0 🔻	3 SEC	⊒	1 SEC	∎	SET	
2	ON	₹	0 🔻	3 SEC	₹	1 SEC	∎	SET	
3	ON	₹	0 🔻	3 SEC	⊒	1 SEC	∎	SET	
4	ON	₹	0	3 SEC	⊒	1 SEC		SET	
5	ON	₹	0 🔻	3 SEC	∃	1 SEC	∎	SET	
6	ON	₹	0 🔻	3 SEC	⊒	1 SEC		SET	
<<	CH 1~6	₹	>>			NOTIFY		COPY SETTING	
							EVENT	MONITOR	
HELP]						SAVE	CANCE	ïL

ON/OFF

Turn on or turn off the camera alarm. When turned ON, the NVR will trigger an event alarm when motion is detected.

RELAY

Select related output. The NVR will output a signal through the selected relay output port (RS-485).

Caution Relay contacts can bear up to 24V 1A other devices. If it is connected to a power source of more than 24V 1A, the system may have a problem with it.

DWELL

Set sensor operation time between 1 and 15 seconds. The camera alarm will remain active until the assigned dwell time has passed.

PRE-ALARM

Set a recording period in seconds just before motion is detected. Input up to 5 seconds. The prealarm recording mode is always "continuous" at the recording speed that the user sets in the "Record" menu.

MOTION AREA

Set the camera's motion area and sensitivity. The area can be selected by clicking on a specific block or dragging the mouse's cursor across the screen to select multiple blocks. Areas where motion detection is activated will appear with a green border. Unselected areas will be shown with a grey border.

- 1. Click [SET] in the 'MOTION AREA' section to set the area.
- 2. Select the motion detection area and click [SAVE] and then [EXIT] to save the changes. Clicking on SELECT ALL will enable motion detection in the entire camera's FoV.

Note Motion detection area and sensitivity should be set, properly, in consideration of the actual motion that happened on the site.

COPY SETTING

To apply the settings to all cameras connected to the NVR, click on the Copy Settings button:

- 1. Select the channel to get the setting from
- 2. Select the property(s) to copy.
- 3. Select the target channel(s) to apply the setting.
- 4. Click [OK] to apply the setting to all the other selected channel(s).

EVENT MONITOR

Show the event number for each camera. It shows check count numbers, motion detection and sensor detection.

NOTIFY

Enable and select for the sensor notification to create a buzzer sound and/or a pop-up warning when triggered.

Note When "Camera pop-up" is enabled, in a multi-screen mode, the system will switch to singlechannel mode and automatically when the alarm is triggered.

4.3.3. Extra Alarm

Set up alarms for additional NVR abnormalities such as SMART HDD check, VIDEO LOSS, RECORDING FAILURE and DISK FULL.

LARM > EXTRA ALARM		KO:	ି 🛃 🐇	👂 😫 🚀	(
SENSOR	CAMERA A	LARM	Ð	KTRA ALARM

'STOP RECORDING' IN 'SYSTE	M > HDD' SETTI	NG PAGE.			
HELP			SAVE	CANCE	1
			SAVE		

S.M.A.R.T.

Trigger an alarm signal when the HDD is about to be out of operation or is otherwise experiencing drive health issues. Please refer to "4.1.4 HDD" to check the HDD status.

VIDEO LOSS

Trigger an alarm signal when a camera signal is suddenly disconnected.

DISK ERROR

Trigger an alarm signal when the system does not record images due to an error in HDD.

DISK FULL

Trigger an alarm signal when the HDD is occupied with a certain percentage of its capacity. If the user sets HDD FULL as STOP RECORDING and the HDD is occupied with the certain percentage set here, NVR stops recording and the alarm trigger.

Note The extra alarm will appear in the event log only when it is set as "ON".

ON/OFF: Set to 'ON' to enable the alarm type.

RELAY: Select related output. The NVR will output a signal through the selected relay output port (RS-485).

Caution Relay contacts can bear up to 24V 1A other devices. If it is connected to a power source of more than 24V 1A, the system may have a problem with it.

DWELL

Set sensor operation time between 1 and 15 seconds. The camera alarm will remain active until the assigned dwell time has passed.

NOTIFY

Enable and select for the sensor notification to create a buzzer sound and/or a pop-up warning when triggered.

Note When "Camera pop-up" is enabled, in a multi-screen mode, the system will switch to singlechannel mode and automatically when the alarm is triggered.

4.4 Record

4.4.1. Camera Management

Users can register/delete/set up cameras by letting the NVR scan and register cameras automatically or manually search and add cameras.

[DEFAULT MODE]

[ADVANCED CONFIGURATION MODE]

SETUP

Set the camera (Please refer to "3.4 Camera Setup").

DEL

Delete the camera ("3.3. Deleting Cameras").

DELETE PAGE (2)

It deletes cameras on the current page (Please refer to "3.3 Deleting Cameras".)

DELETE ALL (3)

It deletes all cameras (Please refer to "3.3. Deleting Cameras").

CAMERA REGISTRATION (4, 5, 6, 7)

Users can register cameras using the AUTO CONFIGURATION, DRAG & DROP CONFIGURATION and ADVANCED CONFIGURATION. (Please refer to "3.2. Camera Registration").

4.4.2. Recording Schedule

Set a recording schedule for each individual camera. Select a camera from the channel numbers at the top to set a schedule for an individual camera or select "All" to apply the same recording schedule to all camera channels. Recording can be set by each hour from O0 through 23 a day, for all days of the week. You can also set up a special recording mode for holidays.

NO COLOR (Off)

No recording. Even though user-set recording frames in the "CAMERA" setup menu, the system will not record anything if the user sets "OFF" in the schedule table.

YELLOW (Continuous Recording)

Record all the time as set in the "CAMERA" settings.

GREEN (Motion-Detection Recording)

The system records only when motion is detected.

If "ALARM > CAMERA ALARM" is disabled, then the system will record when motion is detected but the motion alarm will not be activated.

ORANGE (Sensor-Activated Recording)

The system records only when a sensor is triggered as set in the "ALARM > SENSOR" menu. If "ALARM > SENSOR" is disabled, then the system will record when a sensor is triggered but the sensor alarm will not be activated.

SKY BLUE (Continuous + Motion Detection Recording)

The system records continuously as set by the "RECORD > CAMERA" menu. When motion is detected according to the settings in "ALARM > EVENT ALARM", the NVR will switch recording mode to motion configuration. If "ALARM > EVENT ALARM" is disabled, then the system will record when motion is detected but the motion alarm will not be activated.

BROWN (Continuous + Sensor-Activated Recording)

The system records continuously as set by the "RECORD > CAMERA" menu. When a sensor is triggered according to the settings in "ALARM > SENSOR", the NVR will switch recording mode to motion configuration. If "ALARM > SENSOR" is disabled, then the system will record when a sensor is triggered but the sensor alarm will not be activated.

PINK (Motion Detection + Sensor-Activated Recording)

The system records only when motion is detected AND when a sensor is triggered at the same time. If both "ALARM > SENSOR" and "ALARM > EVENT ALARM" is disabled, then the system will record

when a sensor is triggered, and motion is detected but neither sensor nor motion detection alarms will be activated.

Note In cases where the recording schedule is set by "CONT + MOT" or "MOT + SENS", the system records by continuous or motion detection mode in normal operation. However, when motion occurs in the motion area or an alarm is activated, then the recording mode will switch to recording as set by "EVENT ALARM" or "SENSOR" of the "ALARM" menu.

Note Dark Blue Color

The data recorded during DST (Daylight Saving Time) will be indicated in Dark Blue color in the Intelli-Search Bar in Playback Mode.

HOLIDAY SETUP

Set up specific days as "holidays" in HOLIDAY SETUP to assign a special recording schedule for those days. The system supports up to 32 holidays.

Press the [DATE] button (I) write a description, and press [ADD] to save the data as a holiday.

Note Instant Recording (Emergency Recording)

In the case of an emergency, the user enables Instant Record by pressing the panic recording button in the menu bar. The system will instantly start recording all the channels with the full-frame rate at the maximum resolution regardless of the recording mode setting.

E-REC will appear in Live Mode and a red-colored bar is shown in the time search bar for video recorded by instant recording.

RECORD 1FPS CONTINUOUS WITH 'CONT+' MODE.

Check the box to set continuous recording to 1FPS when selecting "continuous + xx" modes.

LIMIT EMERGENCY RECORDING TIME

Set a limit to how long the system will record in emergency recording mode. Select from 30sec/60sec/90sec/2min/5min/10min.

4.4.3. Quick Setup

Users can set up multiple cameras with the same recording at once.

- 1. Select the model or camera multi-select to set up. When selecting the 'Model' method, all cameras with the same model's name will be selected.
- 2. When selecting 'Camera multi-select', the user can select the camera wanted to set. If you set the desired camera to 'ON', the user can set up the settings of the cameras set to ON.
- 3. Click the [GET STREAM] button and get the current stream information.
- 4. Click the [GET INFO] button and check the current setup for the cameras.
- 5. Change setup and click [SAVE].
- 6. "CAMERAS ARE SUCCESSFULLY APPLIED" message will appear when the process is completed.

4.5 Network

The NVR can be connected to the network or Internet through either fixed IP or dynamic IP by the proper setting of the NVR and router.

4.5.1. Network

NETWORK > NETWOR	ĸĸ	10 🖗 🖏) 🦻 🖋 🛞
NETWORK DDNS	NOTIFICATION	MOBILE NOTIFY	PATHFINDER
NETWORK TYPE	DHCP	I 🖬	P DETECT
IP ADDRESS	0.0.0.0		1/201
SUBNET MASK	0.0.0.0		1/2
GATEWAY	0.0.0.0		<i>f</i> ai
DNS SERVER	0.0.0	F	ING TEST
TCP/IP PORT	9010 👂	WEB PORT 80	ø
AUTO IP	169.254.5.141	RTSP PORT 55	4 5 4
BANDWIDTH LIMIT	1 Gbps(bits/sec)	RTMP PORT 19	35 🗖
		0%	
	USE UPNP PORT	FORWARDING	
POE SETTING	SETUP	STATUS	
HELP MAINTENANCE		SAVE	CANCEL

NETWORK TYPE

Select either STATIC IP or DHCP for dynamic IP. For proper configuration, it is recommended to assign the NVR a DHCP address and let the NVR auto-discover all the proper network settings, and then change the Network Type to Static IP and save the changes.

- **DHCP:** the NVR will automatically configure the network settings according to the current network requirements. If DHCP is selected, click the 'IP DETECT' button to automatically detect all the network settings.
- STATIC IP: manually enter all necessary network settings. While set to STATIC, the network
 settings will not change when prompted by the connected DHCP router or DHCP network
 device.

IP ADDRESS

Displays the NVR's IP address. If DHCP is selected, the IP address will automatically adjust to match the network's requirements. If STATIC is selected, the IP address can be manually changed as needed.

SUBNET MASK

Subnet Mask address classifies the subnet that the system belongs to. For more information, please consult your network administrator or your Internet provider.

GATEWAY

This is the IP address of the router or gateway server. It is required when connecting to the NVR through the external router over the Internet (from another network). For more information, consult your network administrator or your Internet provider.

DNS SERVER

Enter the IP address of the Domain Name Server. Input the DNS Server information to use DDNS, Email Notifications and NTP Server. For more information, please consult your network administrator or your Internet provider.

TCP/IP PORT

(Default – Port 9010) Input the network port number that is used when connecting to the NVR locally or remotely. If your ISP blocks Port 9010, you may either port forward the blocked port or change to use a different valid port number (ex, 9020). If there are multiple NVRs connected to the same local network, it should be considered to assign each NVR to different TCP/IP Ports.

WEB PORT

(Default – Port 80) Input the port number to use when connecting with a Web Browser. If your ISP blocks Port 80, you may either port forward the blocked port or change to use a different valid web port number (ex, 8080). If there are multiple NVRs connected to the same local network, it should be considered to assign each NVR to different Web Ports.

AUTO IP

Displays the system IP which is assigned through Auto-IP automatically.

BANDWIDTH LIMIT

(Default – 100 Mbps) Depending on the setting made by the user, the system can control the data volume transmitted over a network ranging from 25 kbps up to 1Gbps. This function is effective when under narrow bandwidth network conditions or when the user wants to limit "network bandwidth occupied by video transmission" to a certain level.

USE UPnP (Universal Plug and Play)

UPnP (Universal Plug and Play) Port Forwarding: If a UPnP supported router is connected, the NVR will forward ports automatically after communicating with the router without the need for complicated port forwarding setup at the router.

Once the PC has discovered the NVR using Network Discovery, double-click on the icon to open the NVR's web client. Enter the User ID and Password that is used to log in to the NVR then click 'Connect'.

Note The maximum number of simultaneous connections is 15 users.

POE SETTING

- SETUP: Manually configure the IP address and subnet mask for the cameras connected directly to the NVR's PoE switch.
- STATUS: his option decides the speed mode of the network (10Mbps or 100Mbps) at each POE port. Users can check the status of the cameras connected directly to the NVR's POE switch and reset all PoE cameras as needed. Select from the options Auto (default), Normal, or Type-H. When cameras experience a long ping delay or connectivity issues, try setting the PoE's setting to Type-H. It is not recommended to have all ports set to Type-H.

Note This option is not available on 16CH Models. All ports work at 100Mbps mode only.

MAINTENANCE

Check the network status and set up the MAC address filter, IP address filter and HTTPS certificate.

MAINTENANCE									
NETWORK MONITOR	STATUS								
MAC ADDRESS FILTER	SETTINGS								
IP ADDRESS FILTER	SETTINGS								
HTTPS/CERTIFICATES	SETTINGS								
CLOSE									

NETWORK MONITOR

Check the network status for each camera and data flow information for the NVR and cameras.

MAC ADDRESS FILTER

Block or allow specific MAC addresses of clients connecting using C3 CMS desktop software or mobile viewing application.

NOTE: This function works only on the local network and will not work for web login.

IAC ADDRESS FILI	IER			
ALLOW M/	AC ADDRESS			
NO	MAC ADDRESS	DESCRIPTION		
ADD	EDIT	DELETE		
BLOCK MA	C ADDRESS			
NO	MAC ADDRESS	DESCRIPTION		
ADD	EDIT	DELETE		
* THE MAC ADDRESS FILTER FUNCTION WORKS ONLY ON THE LOCAL NETWORK. * THE MAC ADDRESS FILTER FUNCTION DOES NOT WORK ON WEB LOGIN.				
		SAVE CANCEL		

IP ADDRESS FILTER

This function allows or blocks a specific IP address. When the user registers a specific IP address to allow, only that address can access the module. Or when the user registers a specific IP address to block, that address can't access the module. This function is not working on web Login.

	IP Address	DESCRIPTION
		
ADD	EDIT	
ADD	EDIT	DELETE
BLOCK C	ONNECTION	
NO	IP Address	DESCRIPTION
		l 🗤 🗤 dalam kata 🗤 dalam 🔽

HTTPS/CERTIFICATES

An HTTPS connection is recommended when accessing the NVR remotely from another network. HTTPS connection offers secure access through encrypted communication.

The user must register a certificate for an HTTPS connection. The NVR provides two registration methods:

- Self-signed certificate: generate a certificate at the NVR.
- External certificate: register a certificate issued through an accredited authority.

To register a self-signed certificate, navigate to: NETWORK>NETWORK>MAINTENANCE>HTTPS/CERTIFICATES

Click 'Generate' and fill out the information required. Fields marked with an '*' are mandatory.

HTTPS/CERTIFICATES		HTTPS/CERTIFICATES	
		CERTIFICATE NAME*	<u>s</u>
HTTP	USE HTTP	VALIDITY(DAYS)*	365 🛃
		COUNTRY*	US 🛃
HTTPS	USE HTTPS	STATE OR PROVINCE	M
HTTPS PORT	443 🗖	LOCALITY	s s s s s s s s s s s s s s s s s s s
HTTPS PORT	443	ORGANIZATION	251
SELECT CERTIFICATE	🔽	ORGANIZATION UNIT	station of the state of the sta
		COMMON NAME*	192.168.0.5
	VIEW DELETE	RSA	4096
CERTIFICATE	GENERATE	SHA	256
		ALTERNATIVE HOSTNAME 1	1
	IMPORT	ALTERNATIVE HOSTNAME 2	251
		ALTERNATIVE IP*	192.168.0.5
SAVE	CANCEL	GENERATE	CLOSE

Note The NVR's time zone must be set BEFORE generating the certificate. The time on the NVR and network must match. Skipping this step may impact the validity of the generated certificate and the application time may vary.

When generating a self-signed certificate, a warning may appear when using an HTTPS connection because this certificate is not authenticated through an official authority. There is no problem with encrypted communication whether you register the certificate to the PC or continue with the warning ignored. To access the NVR via an HTTPS connection without the warning, you can import and use the certificate issued through an accredited certification authority.

To register an external certificate, click 'Import'. Locate and upload the certificate from a USB stick.

4.5.2. DDNS

Use a public DDNS server or the DDNS server run by Digital Watchdog (MYDWDDNS.NET) to connect with the NVR remotely.

DDNS SERVER

Digital Watchdog[®] offers free and dependable DDNS service support. This allows you to assign the NVR with a URL address rather than a long-complicated IP Address. This simplified the connection process to the NVR. The DDNS service is supported by Digital Watchdog[®] and is free of charge for our customers.

NETWORK > DDNS		16 🖗 🗟 🕹	🦻 🖋 🛞
NETWORK DDNS	NOTIFICATION	MOBILE NOTIFY	PATHFINDER
UDNS SERVER MYD DDNS SERVER MYD TCP/IP PORT 30 HOST NAME MAC ADDRESS 90:D	Į		JREGISTER
HELP		SAVE	CANCEL

To set up DDNS, configure the following information then click the [SAVE] button.

- Use DDNS: Check this box to enable the use of DDNS address for remote communication with the NVR.
- DDNS SERVER: Select "MYDWDDNS.NET"
- **TCP/IP PORT:** The default is 80. You do not need to change this setting if you are using the DDNS service provided by Digital Watchdog. Use the port information from the *Network* menu.
- HOST NAME: Assign a domain name for your NVR (Ex. NVROFFICE). If the domain name is unavailable, a message will pop up when you click [CHECK]. A random hostname can be automatically assigned by clicking [AUTO GENERATE].

IP MAPPING and EXTERNAL IP

If you are using IP Mapping and Port Forwarding (e.g., using a router for Internet connection), enable both [Use Device IP Mapping] and [Use External IP] for proper connection.

SETTING UP THE REMOTE SOFTWARE (C3 CMS)

In the menu of [Option > Setting], input DDNS Address and Port number. The address of the DDNS SERVER is "mydwddns.net" and the Port is "80".

VIEWING WITH A WEB BROWSER

To connect with the NVR's Web Viewer, users can type the NVR's MAC address + mydwddns.net. In cases where you are using a subdomain name (HOST NAME), type the domain name + mydwddns.net

Example:

1. If MAC address is "00:1C: 84:01:00:02" → input as http://001c84010002.mydwddns.net 2. If the HOST NAME is "NVROFFICE" → input as "http:// NVROFFICE.mydwddns.net"

4.5.3. Notification

NETWORK > NOTIFICATION			10 To 🕄 4	🕸 🦻 🖋 ⊗	
NETWORK	DDNS NO	TIFICATION	MOBILE NOTIFY	PATHFINDER	
		(E-MAIL NOTIFY

YOUR EMAIL #	G MAIL SMTP SERVE ACCOUNT USER NAM 'OUR EMAIL ADDRES	E	PASS	PORT 25 M	
	OPTIO	N NONE		E-MAIL TEST	
HELP			SAVE		

REMOTE NOTIFY

The system can send an alarm message to a remote viewing software by using the IP address of the hosting PC.

Select REMOTE NOTIFY to use this function and set IP address & events.

- IP ADDRESS: Input the IP address of the PC hosting the remote viewing software that will be receiving the event notifications.
- **PORT:** (Default is 8003) Input the port number that is used to communicate with the remote PC.
- **EVENT:** Select which events to be notified about. If "ALL" is selected, all events will trigger a remote notification.

EMAIL NOTIFY

The system can send a notification to an email address.

- Select EMAIL NOTIFY to use this function and set email addresses and events.
 - EMAIL: Input the email address that will receive the events notifications.
 - EVENT: Select which events will trigger notifications. If "ALL" is selected, all the events will trigger a notification.
 - **SNAPSHOT NOTIFY SETUP:** Select camera channels to include live snapshot images of selected channels to the email address. Set the dwell time between camera image captures.
 - VIDEO CLIP ATTACHMENT: Select to include a short video clip with the email notification when either a sensor or motion detection (CAMERA ALARM) has triggered the notification. The event type must also be selected.

NOTIFICATION SETTINGS

- **OUTGOING MAIL SMTP SERVER:** Input the SMTP server that is being used to send the notifications. Check with your email service provider for SMTP server information.
- YOUR EMAIL ACCOUNT USER NAME: Input the username or email address from which the notifications will be sent.
- YOUR EMAIL ADDRESS: Input the email address of the account that will be used to send the email notifications.
- **OPTION:** Set the authentication method supported by the server. There are 'None/Use Plain Auth/No Auth' options.
- **CONNECTION:** Set the connection type supported by the email server. There are 'Unsecure Connection/Use SSL Authentication/Use TLS Authentication' options. Check with your email service provider for more information about authentication requirements.
- **PORT:** Input the port number that will be used for email sending. Check with your email service provider for more information on the port that is used for SMTP.
- **PASSWORD:** Input the email password to the account that is being used to send the notification emails.
- **INTERVAL:** For email notification, select how frequently the system will be allowed to send out an update email.
- **EMAIL TEST:** Click to check if the settings were entered correctly. The NVR will send a test email and inform you of the result. Depending on the email service, the SMTP server may not send an email confirmation if the email was received.

Note Configuration priority is always on the "RECORD > SCHEDULE" menu. The system will not email alarm messages upon motion alarm or sensor even though the checkbox of the above event is checked. To receive motion and sensor email notifications, set the "SCHEDULE > RECORD", "EVENT > MOTION ALARM" and "EVENT > SENSOR" accordingly.

4.5.4. Mobile Notify

The system can send an event notification to the mobile device registered with the NVR. The mobile app "VMAX Plus" must be installed on your smartphone device and the NVR site must be added to the mobile application before registration for mobile push notifications can occur. The "USE PUSH CHECK" setting must be enabled in the VMAX Plus application for the NVR site.

When the mobile device is registered to the NVR correctly, it will appear on the Mobile Notify list, alongside a unique Device ID for the registered mobile device.

- USE MOBILE NOTIFY: Enable this setting to use mobile push notifications.
- EVENT: Select the event to notify.
- **DELETE:** To delete a listed mobile device, select the device then click the 'Delete' button. The USE PUSH CHECK setting in the VMAX Plus mobile application will then also be disabled.

NETWORK :	> MOBILE NOT	IFY	400 TO 🗐 🗳	> 🗣 🧟 🖉
NETWORK	DDNS	NOTIFICATION	MOBILE NOTIFY	PATHFINDER

NO			DEVICE ID	
		0	DELETE	DELETE ALL
	event 🔲 All			
			MOTION ALARM	
	VIDEO I META D		S.M.A.R.T	
INT	ERVAL 1 MIN			
HELP			SAVE	CANCEL

- **NOTE**1. The Mobile Push Notification function is available for iPhone, iPad & Android devices using the VMAX Plus mobile application. Otherwise, the mobile application "DW Mobile Plus" can be used for general remote viewing with the NVR.
 - 2. The maximum number of mobile devices is 50.

NOTE Push Notification will only work when both the NVR and mobile devices have a direct connection using the local network (LAN) or over a remote Internet connection. Direct connection (IP address) is needed as PathFinder connections may not support push notifications.

4.5.5. PathFinder™

PathFinder uses STUN communication to assist with the encryption and stream security between the viewer and the NVR when connected using DW's connection service. This connection method offers an alternative means to view video from the NVR over a remote connection without the need for port forwarding.

- USE PATHFINDER: Enable this setting to activate the PathFinder service for the NVR. Click SAVE to apply the changes.
- **PATHFINDER ID:** A unique 21-character alphanumerical identification number will be generated for the NVR. This ID can be either used to connect with a web browser (www.ezpathfinder.com/p2p) or by being manually entered into the DW Mobile Plus mobile viewing application.
- **QR CODE:** Users can scan the QR code using the DW Mobile Plus or VMAX Plus mobile viewing applications to automatically enter the PathFinder ID into the site settings while registering the NVR within the mobile application.
- STATUS: Users can check the NVR's PathFinder status at the bottom of the screen.

Note Please refer to "Section 6. PathFinder Connection Through the Web" for the details.

4.6 Export

4.6.1. Manual Export

Users can easily export recorded video from the NVR to a USB memory stick.

- 1. In Live Mode, click the [EXPORT] icon in the menu bar to open the EXPORT menu.
- 2. In Playback Mode, press the [QUICK EXPORT] icon in the menu bar. Pressing it once will indicate the start time for the backup file. Click the icon again to indicate the end time for the backup clip. The EXPORT menu screen will appear.

EXPORT	40 TO 🗟 🖏 🖇 🖉 🔗
EXPO	RT
CAMERA	VALL V1 V2 V3 V4 V5 V6 V7 V8 V9 V10 V11 V12 V13 V14 V15 V16

DEVICE FILE FORMAT	SSF FILE FORMAT
FILE SIZE PASSWORD	ESTIMATE ADD VIEWER
PROGRESS	0%
HELP	CLOSE

- 3. Connect an appropriate USB memory stick and press [SCAN] to recognize it before starting the export process. The USB device must use FAT32 format to be recognized by the NVR.
- 4. Adjust the following options for the video export as needed:
 - **CAMERA:** Select the camera channels to be included in the exported file. Select 'ALL' to include all camera channels.
 - **FROM:** Set the start time of the exported video.
 - TO: Set the end time of the exported video.
 - **DEVICE:** Click [SCAN] to detect the connected USB memory stick. The USB device must be using FAT32 format.
 - FILE FORMAT: The exported video clip will be saved in .SSF file type and can only be viewed using the DW Backup Viewer tool or with a media player that supports SSF format.
 - FILE SIZE: Click the [ESTIMATE] button to calculate the estimated file size. If the file is too large, reduce the number of camera channels or the length of the video footage to reduce the size.
 - **ADD VIEWER:** Enable this setting include the Backup Viewer with the archived file, which can be used to view the exported SSF video file on a PC.
 - **PASSWORD:** Add a password to protect the file if needed. The password will need to be entered to view the file on a PC.
- 5. Click [START] to start the export process. A progress bar will appear on the screen. Click the [CANCEL] button to abort the export process. DO NOT remove the USB until the file export has been completed.

NOTE A user, who is not an ADMIN user, can access the Export menu only if their user account has both the Export function and menu access authorization enabled by the system administrator.

4.6.2. Backup Video Playback

If [ADD VIEWER] is selected, the backup image can be reviewed on a PC with no need to install additional software. Once the backup device (USB) is connected to a PC the files will appear in the exported folder.

1. To play recorded data, open the exported folder and double-click the "MultiBackupPlayer.exe" file. In the Backup Player, open the video data file (SSF format) that you wish to playback.

- 2. To playback a single channel, click the [SINGLE CH] tab (\oplus) and select an SSF file to playback then drag it into the viewing area.
- 3. To playback, multiple channels, click the [MULTI CH] tab and 'Search' to open the folder that keeps all SSF files.

You can print or export an image and digital zoom by using the icons (2) at the bottom-left of the player window.

Option MENU

Various settings are available in the OPTIONS window of the backup player software.

- Use DeInterlace: The user can uncheck the DeInterlace checkbox in the "Option" menu. Some PCs do not support "DeInterlace".
- Show Image Info on Snapshot: The image information will be added as a text overlay when exporting an image.

WATERMARK Verification and Convert to AVI File

Convert the backup file to an AVI file to play the file in ordinary media players. The third-party media player must support AVI files.

- 1. Playback the SSF file in Single CH mode and click [Pause].
- 2. Click [AVI Convert].
- 3. Define the start and end times.

When the AVI file is played back in the Backup Viewer, verify whether the file has been altered or not by pressing the [Watermark] button (......). If the file has been altered, a popup message will appear.

No alteration was found

AVI video clip has been altered

5. Web Surveillance with Web Browser

The VMAX^{*} IP G4[™] has a built-in web server by itself. This allows you to access the system by an ordinary web browser via the network for live monitoring, playback, or remote configuration without installing any additional software.

5.1 Web Login

Using a web browser (Google Chrome is recommended), type the NVR's IP Address or DDNS address in the address bar. If the Web Port is set to the default (Port 80), the URL would be "192.168.1.80", which is the equivalent of "192.168.1.80:80". However, if the Web Port was changed to "85", the URL would look like "192.168.1.80:85".

When the login page appears, enter the user ID and password. The default user ID is "admin" and the password is set by the administrator when the NVR is booted-up for the first time.

5.2 Web Monitoring

After logging in, the live view from the NVR will appear on the web page automatically. Users can also select Playback, Setup, QSG, Manual, FAQ, Support, or Logout.

TimeTable		No Channel	No C	Channel		No Channel
IB Mode ⊕PTZ						

LIVE

Users can connect or disconnect all channels and select a specific channel to view in live or Playback Mode.

TIME TABLE

Users can open the timetable and playback at any time they want.

MODE

Users can change screen mode.

PTZ

Users can control Pan/Tilt, Zoom In/Out, Focus In/Out and Preset buttons to control PTZ cameras connected to the NVR.

POP-UP MENU

Right-click to open additional options:

- Close all Channels: Close all channels.
- Close the selected channels: Close the selected channels.
- Go To Live / Playback: Change to Live or Playback Mode.
- **Panoramic View:** Change screen mode to horizontal, vertical, or quad-screen mode.
- Stream Type: Set the stream type. (Auto / 1st/ 2nd)
- Show Text: Set the information to display. (Channel title / Mode [Live/Playback] / Date / Time / Resolution)

5.3 Web Playback

To remotely playback video from the NVR, click the timetable or [Go To Playback] from the pop-up menu.

PLAYBACK TIME

Select the date and time from the timetable.

Intelli-search bar

Move the red-vertical line to the time that the user wants to search. The colors of the time bar indicate the different recording modes. Refer to "4.3.2" for more information.

Playback controls

Use the Fast Forward, Rewind and Play/ Pause buttons to control the playback video.

5.4 NVR's Setup Menus from the Web Viewer

NOTE This NVR system has a built-in web server. Therefore, this web CGI screen is directly supported by the built-in web server of NVR regardless of the Internet connection.

NOTE SYSTEM REBOOT enables users to reboot the system without any change to the setup. Users can use this function when the network is disconnected due to abnormal operation of the system and try to reconnect. IP number assigned to the system may be changed in the case of DHCP mode.

6.PathFinder[™] Connection Through the Web

6.1 myDW[™] PathFinder Login

To connect to the NVR through PathFinder from the web, input the address of 'https://pf.mydw.cloud' in the web and open the following login screen.

In ryte termor x + ← → C is playouthed		• - 0 ۵۵44404
	LOGIN Host & Zatr tod	
	User ID Dar we10	
	Password Entir parsword	
	Connect Recentor D	

- Host: Enter the IP address, URL, or PathFinder ID for the NVR to connect.
- User ID: Enter the user ID of the DVR to connect.
- **Password:** Enter the password of the DVR to connect.

6.2 Live

After logging in, the live view from the NVR will appear on the web page automatically.

Users can connect or disconnect all channels and select a specific channel to view in live or Playback Mode.

• LIVE: Users can connect or disconnect all channels and select a specific channel to view in live or Playback Mode.

Close the selected channels

- TIME TABLE: Users can open the timetable and playback at any time they want.
- MODE: Users can change screen mode.
- **PTZ:** Users can control Pan/Tilt, Zoom In/Out, Focus In/Out and Preset buttons to control PTZ cameras connected to the NVR.
- **POP-UP MENU:** Right-click to open additional options:
 - Close all Channels: Close all channels.
 - **Close the selected channels:** Close the selected channels.
 - **Go To Live / Playback:** Change to Live or Playback Mode.
 - **Panoramic View:** Change screen mode to horizontal, vertical, or quad-screen mode.
 - \circ Stream Type: Set the stream type. (Auto / 1st/ 2nd)
 - Show Text: Set the information to display. (Channel title / Mode [Live/Playback] / Date / Time / Resolution)

6.3 Playback

To remotely playback video from the NVR, click the timetable or [Go To Playback] from the pop-up menu.

- PLAYBACK TIME: Select the date and time from the timetable.
- Intelli-search bar: Move the red-vertical line to the time that the user wants to search. The colors of the time bar indicate the different recording modes. Refer to "4.3.2" for more information.
- **Playback controls:** Use the Fast Forward, Rewind and Play/ Pause buttons to control the playback video.

6.4 Setup

Users can open new screen for web setup by clicking 'Setup' in the upper-right corner of the screen. Recorder settings can be configured by the administrator with these menus.

7.Q&A

- 1. NVR does not record images in sensor mode and/or motion mode.
 - 1) It records images only when there is an event for the corresponding mode.
 - 2) Check that the settings are correct in the menus: [Event > Sensor], [Event > Camera Alarm], and [Record > Schedule].
- 2. There is an HDD installed but the "No HDD" icon (BOD) is still shown on the screen.
 - 1) Check the cable connection of the HDD again.
 - If you can see the HDD list at [System > HDD] but the capacity indicates "0", the HDD requires format.
- 3. There is nothing displayed on the True HD/VGA monitor though electric power is supplied to the NVR.
 - 1) Check if the power is supplied properly. You should be able to hear the noise from the fan and HDD operation.
 - 2) Check the True HD/VGA cable connection with the NVR. Remove all the cable connections, except for the monitor cable, and then apply power to the NVR again.
 - 3) In cases where the display screen is stopped at the logo screen, please contact Digital Watchdog's technical support for additional information.

4. Is it necessary to open the port when using DDNS?

Yes, it is. DDNS is the function that lets remote connections acknowledge the changed address of the NVR (dynamic IP provided by ISP) or allow connection to the NVR by the domain without memorizing IP.

5. The remote software connection to the NVR works fine but the WEB connection doesn't work.

1) Some ISP blocks port number 80. Please try again after changing the WEB port.

(8080 is the recommended alternative)

2) Check whether port 80 is opened or not.

6. Image is not shown after login at WEB monitoring.

TCP Base port should be opened. The default of the TCP base port is 9010.

7. The image on the remote software has suddenly disappeared after displaying it for a brief time.

- 1) Some ISPs restrict upload data/traffic volume. Please contact your ISP.
- 2) Upload traffic restrictions can be easily checked with the following steps.
 - > Turn off the power of your Modem & Router.
 - > After 60seconds, turn on the power of your Modem first and then Router.
 - > After reconnection, if it is disconnected again after a brief time (in a similar period later), it means that the ISP restricts upload traffic.

8. A backup or firmware upgrade through a USB memory stick cannot be made though it is detected by the NVR.

- 1) USB memory stick should be formatted by FAT or FAT 32.
- 2) It is not allowed to use a partitioned or password-encoded USB memory.

9. Time sync through the NTP server does not work.

The NTP server requires a DNS server address. Check if the DNS server address is correct at the [Network] setup page.

10. Email transmission does not work in using the Email to notify function.

- 1) The Email notification function works based on the SMTP service.
- 2) Check if the sending mail address is correct and if the mail server supports the SMTP service.
- 3) If you are using an SMTP service that is based on TLS authentication (including SSL) such as Gmail and yahoo mail, enable [Use SSL Authentication] at the [Notification] setup page.
- 4) SMTP service is provided based on DNS. Check if the DNS server address is correct at the [Network] setup page.

9. Warranty Information

Go to <u>https://digital-watchdog.com/page/rma-landing-page/</u> to learn more about Digital Watchdog's warranty and RMA.

To obtain warranty or out of warranty service, please contact a technical support representative at: 1+ (866) 446-3595, Monday through Friday from 9:00 AM to 8:00 PM EST.

A purchase receipt or other proof of the date of the original purchase is needed before warranty service is rendered. This warranty only covers failures due to defects in materials and workmanship which arise during normal use. This warranty does not cover damages that occur in shipment or failures which are caused by products not supplied by the Warrantor or failures which result from accident, misuse, abuse, neglect, mishandling, misapplication, alteration, modification, faulty installation, setup adjustments, improper antenna, inadequate signal pickup, maladjustments of consumer controls, improper operation, power line surge, improper voltage supply, lightning damage, rental use of the product or service by anyone other than an authorized repair facility or damage that is attributable to acts of God.

10.Limits and Exclusions

There are no express warranties except as listed above. The Warrantor will not be liable for incidental or consequential damages (including without limitation, damage to recording media) resulting from the use of these products or arising out of any breach of the warranty. All express and implied warranties, including the warranties of merchantability and fitness for a particular purpose, are limited to the applicable warranty period set forth above.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above exclusions or limitations may not apply to you. This warranty gives you specific legal rights, and you may also have other rights from vary from state to state. If the problem is not handled to your satisfaction, then write to the following address: Digital Watchdog, Inc. ATTN: RMA Department 16220 Bloomfield Ave

Service calls that do not involve defective materials or workmanship as determined by the Warrantor, in its sole discretion, are not covered. The cost of such service calls is the responsibility of the purchaser.

Cerritos, CA 90703
