Complete Scalable Video Management

 **CheckMyCCTV**™
Maintenance Reinvented

DW Spectrum® IPVMS v3.2 – Built for Users™

Cerritos, CA (March 22, 2019) – DW® Complete Surveillance Solutions, the industry leader in digital recorders, surveillance cameras and related management software, is pleased to announce that our flagship software, DW Spectrum® IPVMS is now supported on CheckMyCCTV™. CheckMyCCTV™ is a software solution to monitor the status of multi-brand, multi-location CCTV systems. The software ensures all supported CCTV systems are working and fit for purpose 24/7. CheckMyCCTV™ automatically checks DW Spectrum® and other supported solutions in remote installations for faults and other issues, so integrators can provide a proactive and targeted service.

“We are excited to add CheckMyCCTV™ as a DW Spectrum® technology partner. This partnership is one more example of how DW Spectrum’s open architecture offers installers and users more power and more capabilities,” said Patrick Kelly, Director of IP Video Solutions, DW®. “This partnership offers DW Spectrum® integrators an opportunity to provide customers and users with a value-added service.”

"Adding additional services is a growth market, and CheckMyCCTV™ allows Monitoring Stations and Integrators to offer remote maintenance checks as part of their value-added service, and create new revenue streams," said Regis Glorieux, President of IPX360 Solutions, CheckMyCCTV's North America Sales and Support Partner. "The addition of the popular DW Spectrum® IPVMS platform gives Integrators a real unique selling point across multi-site installations. By offering customers additional piece-of-mind that their CCTV is working and fit for purpose, and reducing the time and effort it takes to support multiple installations."

The checks that can be performed on DW Spectrum® IPVMS using CheckMyCCTV™ include:

- **Network Status** – Ensures connectivity to the system.
- **Camera Status** – Checks the status of the cameras connected to the system.
- **Image Check** – Checks for camera alignment, images which are too bright or dark, or out of focus.
- **Record Duration** – Ensures the system is recording for the correct user-defined time period.
- **Recording Check** – Checks if the system is recording correctly.
- **Time Accuracy** – Ensures the time and date on the device is accurate.

These checks ensure that the system is working and operating as expected in a fraction of the time it takes to manually check them.

DW Spectrum® IPVMS is accessed with the freely distributed DW Spectrum® client software (Windows®/Linux®/Mac®), the DW Cloud™ web client from all leading web browsers (Google® Chrome, Firefox®, Internet Explorer®, Safari® and Opera®), as well as the free DW Spectrum® mobile app for iOS® and Android® devices. The VMS software is included with pre-configured DW® Blackjack® NVR servers or it can be installed on third-party Windows® or Ubuntu® Linux-based systems.

DW Spectrum® IPVMS updates automatically in systems where previous v3 software is already installed. Click [here](#) to download the software from the product page on our website or go to www.digital-watchdog.com and search for DW Spectrum®.

ABOUT DW®

Press Release

DW® empowers our customers as the industry-leading single source of value-driven complete solutions for all video surveillance applications (Universal HD over Coax® / hybrid / IP enterprise), focusing on ease of use and ROI.
